RE: Phase I Environmental Site Assessment
Former Capital Records Management, Inc.
475-485 Valley Street, Providence, Rhode Island

Dear Ms. Gianfrancesco:

We are pleased to submit the enclosed report of the Phase I Environmental Site Assessment (ESA) for the above-referenced site. The site assessment was conducted using the Standard Practice E 1527-05 for Environmental Site Assessments published by the American Society for Testing and Materials (ASTM, 2005). The results of our assessment are summarized in the attached report. We have identified two recognized environmental conditions for the subject site.

Note that ASTM E 1527-05 requires that certain elements of a Phase I ESA be updated if the data for the report is more than six months old. Therefore, if this report is to be relied upon after April 9, 2013, we recommend you contact us to discuss your options.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for the opportunity to conduct this work. Please contact the undersigned if we can be of further assistance.

Sincerely,

Brian E. Kortz, CPG
Project Manager

John A. Chambers, PG, LSP
Vice President

Enclosure: Phase I ESA

1 Introduction

Fuss & O'Neill, Inc. (Fuss & O'Neill) was retained by the Rhode Island Department of Environmental Management (RIDEM) to conduct a Phase I Environmental Site Assessment (*Phase I ESA*) and Tier 1 Vapor Encroachment Screening (VES) of the property located at 475-485 Valley Street in Providence, Rhode Island (subject site). We understand that RIDEM is conducting the *Phase I ESA* and Tier 1 VES on behalf of WaterFire Providence in anticipation of purchasing the site.

1.1 Objective

The objective of this *Phase I ESA* was to identify recognized environmental conditions (RECs) present at the site. As defined by Standard Practice for Environmental Site Assessments E 1527-05 developed by the American Society for Testing and Materials (ASTM, 2005), REC means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The objective of the Tier 1 VES was to identify vapor encroachment conditions (VECs) associated with the site. As defined by Standard Practice for Vapor Encroachment Screening on Property Involved in Real Estate Transactions E 2600-10 developed by ASTM (ASTM, 2010), VEC means the presence or likely presence of contaminants of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater either on or near the target property, as identified by Tier 1 or Tier 2 procedures. The potential for VEC at the subject site evaluated herein was performed in accordance with Tier 1 VES procedures.

1.2 Scope of Services

This *Phase I ESA* was performed using ASTM Standard Practice E 1527-05 for Environmental Site Assessments (ASTM, 2005). The Tier 1 VES was performed using ASTM Standard Practice for Vapor Encroachment Screening on Property Involved in Real Estate Transactions E 2600-10 (ASTM, 2010),

As this *Phase I ESA* was prepared as part of an United States Environmental Protection Agency (USEPA) Brownfield's Assessment Grant awarded under the Comprehensive Environmental Response and Liability Act (CERCLA) 9604(k)(2)(b), an assessment of controlled substances was also conducted as part of this investigation.

Refer to *Appendix A* for the scope of work and restrictions of this ESA and to *Section 9.0* of this report for limitations on this work product. A listing of the offices contacted for this assessment is provided in *Appendix B*. The qualifications of the Environmental Professionals and other staff involved in the preparation of this document are included in *Appendix C*.

2 Site Overview

2.1 Site Information

2.1.1 Property Location, Size of Parcel and Site Plan

The subject site, former Capital Records Management, Inc., was located on the south side of Valley Street in a M1 Manufacturing zone of Providence, Rhode Island (Providence County). A portion of a United States Geological Survey (USGS) topographic map showing the subject site location is provided as *Figure 1*.

According to City of Providence (City) records, the subject site was a 1.31-acre irregular-shaped parcel identified by the City as Assessor's Plat 27, Lot 263. However, we understand that the subject site is currently under review for an administrative subdivision that would subdivide the subject site into three parcels. The identification of those parcels was not available at the time of this report. For the purposes of this report, the parcels are identified as Parcel A, Parcel B, and Parcel C, as noted on *Figure 2*.

Structures located on the subject site included an approximately 27,333-square foot one story warehouse building. The subject site was unoccupied at the time of the inspection performed for this report. A site plan is provided as *Figure 2*. A copy of the property description card available at the City Tax Assessor's office is attached as *Appendix D*. We understand from WaterFire Providence that the subject site is owned by Lincoln Valley, LLC. However, according to the property information available at the City, the site is owned by Res Real Estate, LLC and Gils Place, LLC. A description of the subject site developed during the site inspection is presented in *Section 6.0*.

2.1.2 Environmental Justice Focus Areas

According to RIDEM Environmental Resource mapping, the subject site was located within an Environmental Justice Zone. If additional assessment activities are conducted within an Environmental Justice Zone, public notification and outreach activities may be warranted in accordance with Section 7.07 of the RIDEM *Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (Remediation Regulations)*.

2.1.3 Site Utilities

According to personnel at the City Public Works Department and Mr. Barnaby Evans, Executive Artistic Director of WaterFire Providence, the subject site was served by municipal sewer and water since the building was constructed in 1930.

The subject site's building was heated by No. 2 fuel oil stored in a 3,000-gallon underground storage tank (UST) located to the west of the site building. However, Phase II ESA activities conducted by Fuss & O'Neill in October 2012, as discussed further in *Section 2.3.4* below, indicated that the size of the UST was approximately 10,000 gallons.

Electric, cable, and telephone services entered the subject site via overhead wires located along Valley Street.

2.1.4 Adjoining Land Use

Based on observations made during the site inspection and available mapping, properties adjoining the subject site include:

Address	Description	Direction from Subject Site
411 Valley Street	Manufacturing	Southwest
68 Hemlock Street	Office Buildings	South and Southeast
501 Valley Street	Precision Industries	East
531 Valley Street	Parking Lot	East and Northeast
490 Valley Street	Warehouse	North
482 Valley Street	Residential	Northwest
466 Valley Street	Auto Service	Northwest

2.2 Physical Setting of Site

2.2.1 Geologic and Physiographic Setting

The topography of the subject site is described as generally flat (USGS, 1987). The regional topography generally slopes down gradually to the south, toward the Woonasquatucket River.

Surficial material at the subject site was mapped as urban land, which is described as human altered material (RIGIS, 2008).

Bedrock beneath the subject site was mapped as Rhode Island Formation, consisting of gray to black, fine- to coarse-grained quartz arenite, litharenite, shale, and conglomerate (Hermes, et al, 1994). Depth to bedrock at the site is not documented, but based on site investigation activities conducted by Paul B. Aldinger and Associates, Inc. (PBA) in March 2006 on adjacent lots to the east, south, and west, bedrock depth was greater than 131 feet below grade (fbg). Additionally, bedrock was not encountered in soil

borings completed as deep as 18 fbg at the subject site as part of Phase II ESA activities conducted in October 2012 by Fuss & O'Neill.

2.2.2 Groundwater

The groundwater beneath the site was classified by RIDEM as GB (RIDEM, 2010b). GB groundwater is designated to be not suitable for public or private drinking water use. GB groundwater areas are typically located beneath highly urbanized areas, permanent waste disposal areas and the area immediately surrounding the permanent waste disposal areas (RIDEM, 2010a).

Based on previous investigations conducted at the subject site and surrounding properties, USGS mapping and field observations of the local topography and surface water hydrology, the inferred groundwater flow direction is to the south, towards the Woonasquatucket River. Based on field investigation activities conducted at the site by Garofalo & Associates, Inc. (Garofalo) in May 1994, depth to groundwater at the site was estimated to be nine fbg. Phase II ESA field investigations conducted by Fuss & O'Neill in October 2012 indicated that the depth to groundwater at the site was approximately eight fbg.

2.2.3 Surface Water

The nearest surface water body, the Woonasquatucket River, was located approximately 200 feet south of the subject site (USGS, 1987). The Woonasquatucket River was classified by RIDEM as Class B1 (RIDEM, 2009). Class B1 waters are designated for primary and secondary contact recreational activities and fish and wildlife habitat. They should be suitable for compatible industrial processes and cooling, hydropower, aquacultural uses, navigation, and irrigation and other agricultural uses. These waters should have good aesthetic value. Primary contact recreational activities may be impacted due to pathogens from approved wastewater discharges. However, all Class B criteria must be met.

Additionally, the Woonasquatucket River is included on the State of Rhode Island 2010 303(d) List of Impaired Waters for cadmium, copper, lead, mercury, biodiversity impacts, polychlorinated biphenyls (PCBs), dioxins, and pathogens (RIDEM, 2010).

Based on the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Panel FM44007C308H attached as *Appendix E*, the majority of the subject site is located within the 100-year flood zone. In addition, the remainder of the site is located within the 500-year flood zone. However, the actual location of the 100-year flood zone could be additionally verified through a site-specific survey. According to WaterFire Providence, a site-specific survey was conducted in September 2012 by Waterman Engineering Company, which indicated that the majority of the site was not located in the 100-year floodplain.

2.2.4 Location of Public Water Supply Sources

The Groundwater Classification & Wellhead Protection Area Map of the Providence quadrangle, available from RIDEM, showed no wellhead protection areas (WHPAs) within a one-half mile radius of the subject site.

2.3 Previous Environmental Investigations

2.3.1 Site Characterization Report

According to files maintained by RIDEM, a release of oil and/or hazardous materials (OHM) to the soil at the subject site was reported to RIDEM by the site owner on December 8, 1993 on a *Hazardous Material Release Notification Form*. Laboratory analytical data of soil samples indicated that petroleum and volatile organic compounds (VOC) were detected on-site in surficial soil. The source of the release of OHM was attributed to historical overflows of fuel oil during fuel oil deliveries to a 3,000 gallon UST located adjacent to the west side of the building.

In response to the notification of a release, RIDEM issued a *Letter of Responsibility* to the site owner on December 23, 1993 requiring a full site characterization. A *Site Characterization Report* was completed by Garofalo on behalf of Mr. Peter Zavota in May 1994. The site characterization included the advancement of six soil borings on the western portion of the subject site near the existing UST area and the loading dock area. Soil samples were collected at five foot intervals and screened with a photoionization detector (PID) for the presence of VOC. The four soil samples with the highest PID readings were sent for laboratory analysis of VOC, total petroleum hydrocarbons (TPH), and PCBs. Laboratory results revealed no detectable levels of VOC, TPH, or PCBs in the four soil samples analyzed by the laboratory. A letter issued to Mr. Zavota by RIDEM on June 23, 1994 indicated that, based on the results of the *Site Characterization Report*, no further action was necessary regarding this particular documented release at the site. A copy of the *Site Characterization Report* and RIDEM correspondence is provided in *Appendix F*.

2.3.2 Former American Locomotive Works Property

A *Phase I ESA* was completed at the former American Locomotive Works (ALCO) property located to the west, south, and east of the subject site in April 2005 by Fuss & O'Neill. Numerous RECs were reported for this property based on the results of the *Phase I ESA* findings. Based on the results of the *Phase I ESA*, Fuss & O'Neill conducted a Phase II ESA/Site Investigation at the site and completed a *Site Investigation Report (SIR)* in March 2006. Site Investigation activities included the installation of soil borings and the collection of soil samples, the installation of monitoring wells and the collection of groundwater samples, and the collection of soil gas samples. Four soil samples collected from soil borings MW-04 and SB-19 and one groundwater sample collected from monitoring well MW-04 were collected in the immediate vicinity of but hydraulically downgradient of the subject site. Semi-volatile

organic compounds (SVOC) and/or metals were detected at concentrations exceeding RIDEM Method 1 Residential Direct Exposure Criteria (R-DEC) and/or the Industrial/Commercial Direct Exposure Criteria (I/C-DEC) in each of the soil samples collected from those soil borings closest to the subject site. The source of the soil containing SVOC and metals was attributed to historic urban filling practices at this property. No compounds were detected in the groundwater sample at concentrations exceeding the RIDEM Method 1 GB Groundwater Objectives (GB-GO). No soil gas samples were collected in the vicinity of the subject site.

In addition to the soil containing SVOC and metals attributed to "urban fill" throughout the ALCO property, several point-source releases of OHM to soil and groundwater were also identified on the ALCO property, but those releases were observed in soil borings and monitoring wells located down- and side-gradient of the subject site in the vicinity of Building 51 (i.e. the former Microfin facility) and in the vicinity of former and current USTs. A site plan from the *SIR* for the ALCO property is included in *Appendix F*. RIDEM approved the *SIR* in a *Remedial Decision Letter* dated July 13, 2006, attached in *Appendix F*.

Individual *Remedial Action Work Plans (RAWPs)* were submitted for Lots 85, 261, and 262 of the ALCO property by Fuss & O'Neill and submitted to RIDEM in August 2006 (Lot 85) and October 2006 (Lots 261 and 262). Remediation activities detailed for the ALCO property in each of the three *RAWPs* that were to be implemented in close proximity to the subject site included soil capping to address direct exposure risks related to SVOC and metals in soil. RIDEM approved the *RAWP* for Lot 85 in an *Order of Approval* dated December 6, 2006 and the *RAWPs* for Lots 261 and 262 in a *Remedial Approval Letter* dated January 23, 2007, copies of which are attached in *Appendix F*. Soil capping activities were implemented in 2006 and are currently on-going.

2.3.3 September 2011 Phase I ESA

A *Phase I ESA* was performed on the subject site in September 2011 by Fuss & O'Neill, on behalf of RIDEM. This *Phase I ESA* documented the following five RECs on the property:

REC #1 – Historical Site Use: Historical industrial activity at the subject site, including the use and storage of hazardous materials, may have led to releases of OHM at the site. According to Sanborn mapping, information provided by WaterFire Providence, and previous site investigations, the subject property was a part of the ALCO complex until 1918 and then part of the U.S. Rubber complex from 1918 through 1967. Materials stored on-site during this time included sodium hydroxide, paint thinner, lubricating oil, and mineral spirits. In addition, two rail lines entered the building from the east. C O Hoffacker, who rebuilt heavy machinery and machine tools, operated at the site from the 1970s through the mid 1990s. Oil and cooling fluids were used on-site at this time. Releases of OHM to the subsurface throughout the historical industrial usage of the site could potentially adversely affect the quality of environmental media at the subject site.

REC #2 – USTs: The following USTs were formerly or currently located at the site:

- One former 4,000-gallon No. 2 fuel oil UST was located adjacent to the site building to the west. The age of this UST was unknown, and it was removed in 1993 and a Closure Certificate

was issued by RIDEM. However, no information regarding a closure assessment or confirmatory sampling of the UST grave was available in files reviewed.

- One former 800-gallon No. 2 fuel oil UST was located adjacent to the site building to the east. The age of this UST was unknown, and a closure application for this UST dated December 1998 was on file at RIDEM and the fire department. However, no closure documentation or Closure Certificate were available for this UST.
- One No. 2 fuel oil UST was identified at the subject site in the vicinity of the former 4,000-gallon UST. According to WaterFire Providence, this UST was currently in use for heating purposes only. According to records available at RIDEM, this tank was installed in December 1992.
 - The September 2011 *Phase I ESA Report* stated the estimated volume of this UST was 3,000 gallons. However, Phase II ESA activities conducted by Fuss & O'Neill in October 2012 indicated that the size of the UST was approximately 10,000 gallons.

REC # 3 - Documented Release of Contaminants in Soil: The December 1993 release notification indicated that TPH and VOC contamination was present in surficial soil at the site in the vicinity of the former 4,000-gallon UST area. Further testing documented in the *Site Characterization Report* indicated that no compounds were detected in soil samples that exceeded RIDEM criteria. RIDEM issued a letter requiring no further action regarding this release. However, residual concentrations of these compounds may still be present at the site.

REC # 4 – Indoor Trenches and Floor Drains: Several drains and trenches sealed with concrete and one open, grated trench was observed during the site inspection. Previous investigations indicated that most of these drains discharged to the municipal sewer system. However, records documenting the nature and usage of these systems and their ultimate discharge points were not available in files reviewed for this *Phase I ESA*. Releases of OHM to the subsurface via floor drains and trenches could potentially adversely affect the environmental quality of the subject site.

REC # 5 – Transformers: Two transformers were observed in the interior of the southeast corner of the building beneath the crane system, and staining was observed on the transformers and the floor. In addition, a transformer pad was also observed on the exterior of the southeastern portion of the building. The transformers were reportedly removed from this area. However, pavement was observed to be in poor condition. Based on their potential age, these transformers potentially contained PCBs.

While not specifically identified as RECs, two additional concerns were identified which may have the potential to impact current or future uses at the subject site:

Hazardous Building Materials: A visual inspection for hazardous building materials, including asbestos-containing materials (ACM), lead-based paint, polychlorinated biphenyl (PCB)-containing materials, and mercury-containing materials, concluded that these hazardous materials were likely present in significant quantities throughout the site building.

Proximal Release Properties: Properties within close proximity to the subject site have been impacted by releases of OHM. The ALCO property, located downgradient of the site, was impacted with releases of OHM to soil and groundwater, including metals and SVOC in soil in the immediate vicinity of the subject site that was attributed to urban filling practices. Remediation activities have been implemented at the ALCO site and are currently on-going. The subject site and surrounding ALCO property were once formerly both occupied and operated as one complex by U.S. Rubber Co. While contaminants released at nearby properties have the potential to migrate to the subject site, contamination that has migrated to the subject site from off-site sources may not be the responsibility of the site owner solely as a result of property ownership. However, such migrating contaminants have the potential to impact the environmental quality of the subject site.

2.3.4 October 2012 Phase II ESA

Fuss & O'Neill conducted a Site Investigation (Phase II ESA) at the subject site in October 2012, on behalf of RIDEM. At the time of this report, a *Site Investigation Report* was in preparation by Fuss & O'Neill that will summarize the Phase II ESA results. The report is expected to identify the following conclusions based on the results of the Phase II ESA:

- A Ground-Penetrating Radar (GPR) survey conducted over the exterior of the site did not identify anomalies potentially indicative of the presence of USTs at the site, except for the known 10,000-gallon heating-oil UST.
- Metals and SVOC were detected in soil samples at levels above the RIDEM Industrial/Commercial Direct Exposure Criteria (I/C-DEC) throughout the site. These exceedances are attributed to the presence of fill materials comprised of brick, concrete, asphalt, coal, and ash deposited site-wide at depths of up to eight fbg.
- PCBs were identified in surface soil samples at levels above the RIDEM I/C-DEC and GB Leachability Criteria (GB-LC) collected from adjacent to a concrete pad that formerly supported electrical transformers on Parcel C. Refer to *Section 4.4* below for further discussion of the transformers.
- VOC (vinyl chloride) was identified in a groundwater sample collected from a monitoring well located south of the loading dock on Parcel A at a level above the RIDEM GB Groundwater Objectives (GB-GO).
- A soil vapor study indicated that the existence of a vapor intrusion pathway was not supported by the dataset. However, several VOC were detected in the soil vapor samples collected from beneath the building on Parcel B.
- A hazardous building-materials sampling program confirmed the presence of ACM, lead-based paint (LBP) and PCB-containing bulk materials in the subject site building.

The results of the Site Investigation were utilized to evaluate the RECs identified in the September 2011 *Phase I ESA Report*, summarized in *Section 2.3.3* above. Based on the Site Investigation results, RECs #2

(i.e. USTs), #3 (i.e. documented release to soil), and #4 (i.e. indoor trenches and floor drains) are no longer considered RECs for the site.

3 Site History

The following sources were used to develop the history of the subject site and, to the extent required by ASTM Practice E 1527-05, the nearby sites:

Source Reference Number	Information Source
1	A summary of city street-directory information was provided by Environmental Data Resources (EDR) for the years 1940, 1945, 1950, 1955, 1961, 1966, 1971, 1977, 1983, 1988, 1996, 2001, 2006, and 2011.
2	Sanborn Fire Insurance Maps provided by EDR for the years 1921, 1951, 1956, 1958, and 1982.
3	Aerial photographs (available from the Rhode Island Geographic Information System) for the years 1939, 1951-52, 1962, 1972, 1976, 1981, 1988, 1992, 1997, 2004, and 2008.
4	Historical USGS Topographic Maps for the year 1894, available from the Documents Department and Data Center of the University of New Hampshire.
5	Key site manager, Mr. Barnaby Evans, Executive Artistic Director of WaterFire Providence, the prospective purchaser of the subject site.
6	<i>Site Characterization Report</i> prepared by Garofalo in May 1994.
7	U.S. Rubber Co. Underground Piping Plan dated January 1930 from the April 2005 <i>Phase I ESA</i> for the ALCO property prepared by Fuss & O'Neill (copy available in <i>Appendix F</i>).
8	April 2005 <i>Phase I ESA</i> , March 2006 <i>SIR</i> , and remediation documentation for ALCO property prepared by Fuss & O'Neill.
9	Files and personnel at the City of Providence offices of the Engineering Department, Planning and Zoning Department, and Fire Department.

The following table summarizes the history of the subject site and nearby properties as determined from the above sources.

SITE HISTORY			
Date(s)	Site	Nearby Properties	Source Reference Number
1877-1898	Site owned by RI Locomotive Works.	Light industrial development surrounding the site.	4, 6
1898-1899	Site owned by RI Hospital Trust Co.	No information.	6
1899-1901	Site owned by International Air Power.	No information.	6
1901-1902	Site owned by Nathan A. Smyth.	No information.	6
1902-1918	Site owned by American Locomotive Works (ALCO).	No information.	6
1918-1967	Site owned by U.S. Rubber Co. Chemicals used on-site during U.S. Rubber Co. ownership may have included sodium hydroxide, paint thinner, lacquer, enamel, lubricating oil, and mineral spirits.	Surrounding buildings to east, west, and south also owned by U.S. Rubber Co.	6
1921	No building on-site	Surrounding area mostly industrial, listed as part of Revere Rubber.	2
1930	Current building constructed on-site, used as a maintenance shop and for testing/repair of equipment. Listed as "Roll Covering" building, Two railroad tracks entered building from the east.	Surrounding buildings to the west, south, and east all part of U.S. Rubber Co. A 10,000-barrel oil tank was located to the east of the subject site adjacent to Building 55	5, 7
1939	No significant changes.	Surrounding area mostly industrial, some residential development to the north.	3
1940	According to City Property Card, the current building was constructed. However, other sources identify the building construction as 1930.	No significant changes.	7, 9
1951	Building on-site listed as part of U.S. Rubber Co., labeled, as Building No. 85 and "Roll Covering." Small addition on the southern portion of the building labeled as "vulcanizing."	Buildings to the west, south, and east part of U.S. Rubber Co., several dwellings to the north	2, 3

SITE HISTORY			
Date(s)	Site	Nearby Properties	Source Reference Number
1967-1976	Site owned by Uniroyal, Inc.	No significant changes.	6
1972	No significant changes.	Building 54 on U.S. Rubber property appears demolished. Some other previous buildings not depicted.	3
1973-1999	C.O. Hoffacker rented site from owners, used site for re-building heavy machinery and machine tools. Chemicals used by C.O. Hoffacker included cutting oil and machining and cooling fluids.	No significant changes.	5, 6
1976-1985	Site owned by Jopelo Realty Co., Inc., used primarily for storage purposes.	No significant changes	5, 6
1982	No significant changes.	Surrounding industrial buildings still listed as belonging to U.S. Rubber Co.	2
1985-1999	Site owned by Zavota Brothers Rigging (Peter and Louis Zavota)	No significant changes.	5, 6
1992	UST currently used for heating purposes installed on-site	No significant changes.	6
June 1993	Former heating oil UST removed from the western portion of the site.	No significant changes.	6
Dec. 1993	Petroleum in soil was identified and reported to RIDEM. The release was attributed to overflows from historical fuel oil deliveries to the site.	No significant changes.	6
1998	800-gallon No. 2 heating oil UST removed from the eastern portion of the site.	No information.	9
1999-2008	Site owned by CRM, LLC and used for storage purposes.	No information.	1, 5

SITE HISTORY			
Date(s)	Site	Nearby Properties	Source Reference Number
2006	No significant changes.	Phase II ESA activities, including soil and groundwater sample collection, conducted by Fuss & O'Neill on ALCO property to the west, south and east of the site	8
2006-present	No significant changes.	Soil capping activities conducted on ALCO property.	8
Sept. 2012	Site acquired by Lincoln Valley, LLC	No information.	5, 9

The following record of ownership for the subject site was obtained from records maintained by the City Tax Assessor's office:

A.P. 27 Lot 263

Date	Volume/Page	Grantor	Grantee
1976	1193/471	----	Jopelo Realty Co.
1985	1321/950	Jopelo Realty Co.	Peter and Louis Zavota
1999	4001/272	Peter and Louis Zavota	CRM LLC
2012	Not Available	CRM LLC	Lincoln Valley, LLC

Due to the activities on nearby properties, there is the potential for contaminants to have been released on nearby properties and impact groundwater quality at the subject site. However, contamination that has migrated to the subject site from off-site sources may not be the responsibility of the site owner solely as a result of property ownership.

4 Federal, State and Local File Review

Files of Federal, State and local agencies were reviewed for environmentally-related issues pertinent to the subject site and nearby parcels, such as permits, inspection reports, enforcement history or documented releases of hazardous materials. The sources of information listed in the following table were researched to identify properties of concern within distances of the subject site specified by ASTM Practice E 1527-05.

Information Source*	Search Distance

*Fuss & O'Neill used Environmental Data Resources (EDR), an environmental database search service, to obtain the information referenced in the above table. EDR provides access to publicly available environmental databases maintained by various Federal, State, and local agencies. A copy of the information provided by EDR relative to the subject site and nearby properties is included in *Appendix G*. The listed information sources are defined and described in detail in the EDR report.

4.1 Summary of Regulatory Database Information

The environmental databases provide the following information for the subject site:

- Former Capital Records Management: The subject site was listed as a US Brownfields site.
- Japelo Realty: The subject site was listed as an inactive State Hazardous Waste Management Program site with the file code JAPR-HWM/INACTIVE. Please note that the RIDEM files incorrectly list the site name as "Japelo" instead of "Jopelo."
- CRM, LLC: The subject site was listed as a UST facility with three USTs:
 - 3,000-gallon No. 2 heating oil UST, installed December 1, 1992, listed as in-use.
 - 4,000-gallon No. 2 heating oil UST, installed April 25, 2001, listed as permanently closed.
 - 800-gallon No. 2 heating oil UST, installed April 25, 2001, listed as permanently closed.

Based on other sources, the dates of installation on the two permanently closed USTs are incorrect. The actual dates of installation are unknown but are believed to be greater than 50 years ago. Additionally, Phase II ESA activities conducted by Fuss & O'Neill in October 2012 indicated that the volume of the current UST is 10,000 gallons.

- C O Hoffacker: The subject site was listed as a small quantity generator of hazardous waste when C O Hoffacker operated at the site.

As reported in the EDR report in *Appendix G*, several properties were identified in the environmental databases within the minimum search radii required by ASTM Practice E 1527-05. Based on their proximity to the site and the local hydrogeology, these parcels were not anticipated to have a negative affect on the subject property, with the following exceptions:

- William Dandreta Company: 28 Wolcott Street (0.098 miles north-northwest) – This property was registered as a leaking UST (LUST) in 2006. One 2,000-gallon No. 2 heating oil UST reportedly located at this property was permanently closed.

4.2 RIDEM File Review

Based on information provided in the EDR report, State File JAPR-HWM/INACTIVE and UST File 3464 related to the environmental conditions listed above for the subject site and LUST File 28275-ST/SRO for the upgradient William Dandreta Company property were requested and were available for review at the RIDEM Office of Waste Management on August 18, 2011 as a part of the September 2012 *Phase I ESA*. Reports and information contained in these files is summarized below and in previous sections of this report. Copies of select information available in this file are presented in *Appendices F* and *H*. Additionally, Fuss & O'Neill contacted RIDEM on November 15, 2012 regarding the status of these files. According to RIDEM, no additional information was added to these files since the review on August 18, 2011.

4.2.1 State File JAPR-HWM/INACTIVE

The following information was available in the state file for the subject site:

- A release of petroleum to soil was documented at the subject site on December 8, 1993, and a *Release Notification Letter* was submitted to RIDEM by Jopelo Realty Company. This letter stated that lab results from surficial soil samples showed TPH concentrations above RIDEM regulatory criteria and trace concentrations of VOC.
- A *Letter of Responsibility* was issued by RIDEM to Jopelo Realty, Inc. (i.e. Jopelo Realty, Inc.), the site owner at the time, on December 23, 1993. The *Letter of Responsibility* required that a Site Investigation be conducted for the site.
- A Work Plan for the site was submitted to RIDEM by Garofalo on behalf of Jopelo Realty on March 16, 1994. The Work Plan was approved by RIDEM on March 21, 1994.
- A *Site Characterization Report*, prepared by Garofalo on behalf of Mr. Peter Zavota, was submitted to RIDEM on May 19, 1994. Results of this report are discussed further in *Section 2.3.1*, and a copy of this report is available in *Appendix F*.

- A comment letter for the *Site Characterization Report* was sent by RIDEM to Updike, Kelly, Spellacy, & Del Sesto, representatives of Mr. Peter Zavota, on June 8, 1994. A response to comments letter was sent to RIDEM by Garofalo on behalf of Mr. Peter Zavota on June 20, 1994.
- RIDEM approved the *Site Characterization Report* on June 23, 1994. Because soil samples collected as part of the site characterization did not contain OHM at concentrations above applicable RIDEM regulatory criteria, RIDEM required no further action with regard to the documented release at the site.

4.2.2 UST File 3464

The following information was available in the UST file for the subject site:

- On December 29, 1992, RIDEM received an application for the installation of a 3,000-gallon No. 2 fuel oil UST from Jopelo Realty, the site owners, for the current UST located at the site.
- On December 30, 1992, RIDEM approved the application for the installation of the UST.
- On May 24, 1993, Jopelo Realty Inc. submitted an application to RIDEM for the closure of a 2,500-gallon No. 2 fuel oil UST. Other sources showed this UST to be a 4,000-gallon UST.
- On June 11, 1993, RIDEM issued a *Closure Certificate* for a 4,000-gallon No. 2 fuel oil UST located slightly west of the new and current 3,000-gallon UST installed in December 1992. No additional closure documentation or confirmatory soil sampling of the UST grave was available in the file.
- On December 29, 1998, Capital Records Management, Inc., the site owners, submitted an application to RIDEM for the removal of an 800-gallon No. 2 fuel oil UST located to the east of the site building. The UST was approved for removal on January 14, 1999. No closure certificates, closure documentation, or confirmatory soil sampling of the UST grave was available in the file. However, according to Mr. Barnaby Evans of WaterFire Providence, this UST was removed and is not currently located at the site.

4.2.3 LUST File 28275-ST/SRO

The LUST file reviewed for the upgradient William Dandreta Company property located at 28 Wolcott Street contained the following information:

- On November 6, 2006, a *UST Closure Assessment* was submitted to RIDEM by FJA Environmental Associates, Inc. on behalf of the William Dandreta Company. The purpose of this report was to locate, inspect, and remove the 2,000-gallon No. 2 fuel oil UST present at the property and to determine if a release of OHM occurred from this UST. According to the property owner, the UST was used for heating purposes only and was more than 50 years old. In addition, no tightness testing was ever performed for this UST.

On October 12, 2006, a test pit was excavated around the UST, and the UST was removed. Staining and odors were observed in the soil at the bottom of the tank grave. Upon further inspection, evidence of corrosion and pitting was observed on the UST, and several holes were present on the bottom of the UST. Twenty-seven soil samples collected from the tank grave were screened for total VOC with a PID. PID results ranged from not detected above the instrument quantization limit to 54.0 parts per million (ppm). Based on these results, approximately 69.19 tons of soil was excavated from the tank grave and disposed off-property. After excavation, three confirmatory samples were collected from the tank grave and submitted for laboratory analysis of TPH. TPH was not detected above laboratory reporting limits in any of the three samples. Both the UST and the contaminated soil were disposed of off-property on October 13, 2006.

- On December 12, 2006, RIDEM issued a letter to the William Dandreta Company for the approval of the UST closure assessment and to state that no further action was required at this property.

Due to the activities on nearby properties, there is the potential for contaminants to have been released on nearby properties and impact groundwater quality at the subject site. However, contamination that has migrated to the subject site from off-site sources may not be the responsibility of the site owner solely as a result of property ownership.

4.3 Local File Review

Files and personnel at the City offices of the Tax Assessor, Inspection and Standards Department, and Planning and Development Department were queried on November 26, 2012, regarding environmental concerns at the subject site and surrounding sites. No environmental concerns were identified for the subject site in these municipal files.

The Providence Fire Department was also contacted on November 26, 2012, but files were not immediately available for review. However, Fuss & O'Neill did review the Providence Fire Department file for the subject site during the completion of the September 2011 *Phase I ESA*. Environmental concerns identified for the subject site in the Fire Department files included the following:

- A Permanent Closure Application for a UST dated December 29, 1998 was available at the City Fire Department. This application was for the closure of an 800-gallon No. 2 fuel oil UST. The UST was located on the east side of the site adjacent to the building. The age and the date of installation of this UST was listed as unknown. Material was to be removed from the UST via a vacuum truck, and the UST was to be excavated and disposed of off-site. No documentation of actual closure and assessment for releases from the UST was available in the file.

Files were also available from the City Planning and Development Department for the ALCO property, located side- and down-gradient of the subject site. This information is discussed further in other sections of this report.

As part of this assessment, Mr. Steven Hubbs of Fuss & O'Neill interviewed Mr. Choyon Manjrekar of the City Planning and Development Department regarding information pertinent to environmental conditions at the subject site. Mr. Manjrekar stated that he did not have any knowledge of environmental conditions at the subject site. Mr. Manjrekar further stated that the subject-site owner had recently presented a subdivision plan for the property to his department and that he was not aware of any other files that the City Planning and Development Department would have regarding the subject site.

Fuss & O'Neill interviewed Mr. Christopher Ise of the City Planning and Development Department in September 2011, as documented in the September 2011 *Phase I ESA Report*. At that time, Mr. Ise stated that he did not have any knowledge of environmental conditions at the subject site, but that he was aware of the activities that took place on the ALCO property, including environmental sampling, remediation, and construction activities.

No additional RECs beyond those previously mentioned above were identified for the subject site based on the review of available local files.

4.4 Former Transformers

On November 15, 2012, Fuss & O'Neill spoke with Mr. Lloyd Gail of National Grid regarding the former transformer pad located on the exterior of the east side of the building. According to Mr. Gail, the pad formerly contained three transformers each holding approximately 80 gallons of dielectric fluid. The transformers were owned by National Grid and were removed in or before 2006.

5 User-Provided Information

ASTM Practice E 1527-05 describes certain tasks to be performed by the user of this assessment that will help to identify RECs at the subject site if they exist. As part of our agreement to conduct this work, we provided Mr. Barnaby Evans of WaterFire Providence, with a User Questionnaire. A copy of this completed questionnaire is provided in *Appendix I*. The responses to this questionnaire were used to address the items in the subsections below.

5.1 Record of Environmental Liens of Activity and Use Limitations

Chain of title and title restriction records filed under federal, tribal, state or local law contain records of environmental liens or activity and use limitations (AULs, such as environmental land use restrictions [ELURs] in the State of Rhode Island). Mr. Evans reported that he had no actual knowledge of an environmental lien or ELURs recorded against the property.

5.2 Specialized Knowledge or Experience of the User

Mr. Evans reported that he had no specialized knowledge with respect to the site or activities conducted at the site.

5.3 Commonly Known or Reasonably Ascertainable Knowledge

Mr. Evans reported that, other than the previous uses of the property as described in other sections of this report, he was not aware of any commonly known or reasonably ascertainable knowledge within the local community that could assist the environmental professional with the identification of RECs.

5.4 Property Valuation, Reduction for Environmental Issues

Mr. Evans reported that he did not know if the purchase price of the site reflects the fair market value of the site or if the price has not been adjusted for any real or perceived environmental condition.

6 Site Reconnaissance and Interviews

6.1 Site Reconnaissance

The site reconnaissance was conducted by Mr. Steven Hubbs of Fuss & O'Neill, accompanied by Mr. Barnaby Evans of WaterFire Providence, on October 16, 2012. The inspection included the physical observation of the site building and grounds. Photographs taken during the site inspection are presented in *Appendix J*.

Site Description

The site consisted of a 1.31-acre, irregular-shaped parcel improved with an approximately 27,333-square foot warehouse facility and associated paved areas. The remaining portions of the site consisted of overgrown vegetated areas. Access to the subject site was provided via Valley Street. The building was located near the center of the site on Parcel B, and the paved areas were situated west, south, and east of the building on Parcels A and C. Refer to *Figure 2* for a site plan.

Building

This site building consisted of a large, open, two-story warehouse building, which was unoccupied at the time of the inspection. A boiler room, a bathroom, a loading area, and several other enclosures were located within the warehouse building. The floors of the building were concrete and in fair condition

with some minor staining. Most of the staining appeared to be consistent with water staining. However, some of the staining appeared to be consistent with petroleum staining. A floor trench system was located in the southern portion of the building. Portions of the trench were covered with a metal grate or wooden board, and other portions remained open. Trash and dirt were observed in the open portion of the trench, and piping was observed running from the ceiling into the trench. The floor trench was concrete lined, and the former purpose of the trench and discharge point was unknown and could not be determined during the site inspection. In addition, numerous floor drains and other trenches were observed throughout the building. These drains and trenches were all sealed with concrete. Previous reports indicated that the majority of drains and trenches discharged to the municipal sewer. However, no records were available as part of the research conducted for this *Phase I ESA* to document the ultimate discharge points of the trenches and floor drains.

Two large patched areas were also observed running from the east entrances to the center of the building. According to Mr. Evans, railroad tracks were present in the building when the building was owned by U.S. Rubber Co. These tracks were used for delivery and shipping of materials directly into and out of the building. A crane system was present along the ceiling in the southeastern corner of the building. According to information provided by Mr. Evans, the crane was used extensively by C.O. Hoffacker, who was a tenant in the building from the 1970s through the late 1990s.

The boiler room was located in the northwestern section of the building. Three boilers were present in the boiler room, all of which were connected to a 10,000-gallon UST located outside and directly west of the boiler room. A mild petroleum odor was present in the boiler room, and minor staining consistent with petroleum staining was observed on the floor of the boiler room in the vicinity of the boilers. The concrete floor in the boiler room appeared to be in fair condition with no cracking. No floor drains or trenches were observed in the boiler room.

A small bathroom was observed in the northwest corner of the building adjacent to the boiler room. The floor in the bathroom appeared to be in fair condition. Staining on the floor appeared to be consistent with water staining. No floor drains were observed in the bathroom. A small five-gallon bucket of boiler treatment was also observed in the bathroom.

A small walled-off electric area was observed in the southeast corner of the building directly beneath the crane. Two transformers and several electrical boxes were observed on the wall in this area. Based on their potential age, these transformers potentially contained PCBs. Both the transformers and the boxes appeared to be stained, and some staining was observed on the floor in this area. Staining appeared to be consistent with petroleum staining. No floor drains, visible holes or cracks were observed on the floor in this area. Power lines from these transformers and boxes appeared to run out the east side of the building into the former transformer area located outside the building. A dry well was observed near the electrical transformers. The dry well was covered by a heavy concrete cap. According to Mr. Evans, the dry well contained standing water.

At the time of the inspection conducted for this report, the roof of the site building had recently been damaged by high winds. As documented in the photographs in *Appendix J*, Fuss & O'Neill observed rain water falling from the roof and ponding on the floor of the site building. We understand that WaterFire

Providence was coordinating with the current site owner to address the issue at the time of the site inspection.

Grounds

The grounds consisted of paved areas to the west, south, and east of the building with some overgrown vegetated areas along the western, southern, and eastern portions of the building. The western, southern, and eastern site boundaries were fenced, and the northern site boundary abutted Valley Street. Pavement was deteriorated and in generally poor condition. No staining was observed on the pavement during the inspection conducted for this *Phase I ESA*.

One 10,000-gallon heating oil UST was located along the western side of the building in the middle of an overgrown area. The UST was located beneath pavement and was still in use. According to Mr. Evans, the UST was used for heating purposes only. The pavement in the area of the UST appeared to be moderately deteriorated with visible cracks and holes. No staining was observed in the area of the UST.

A loading dock was observed to the south of the UST area. The loading dock was concrete and observed to be in generally poor condition. A manhole cover was observed near the loading dock area. According to previous reports, this structure was identified as a suspected dry well. According to the June 1994 response to comments letter for the *Site Characterization Report*, the structure was determined to discharge to the municipal sewer system and was, therefore, not a dry well.

A manhole cover was observed just outside the south-central portion of the building, as depicted on *Figure 2*. The cover was able to be removed, and a dry well with standing water was observed.

Two aboveground storage tanks (ASTs) were observed within an enclosed area along the southeastern portion of the building. The ASTs appeared empty, and no petroleum staining was observed on the ground in the vicinity of the ASTs.

A former transformer area was located just south of the east entrance. The area was enclosed with a fence and overgrown with vegetation. No transformers were observed within the enclosure, and, according to Mr. Evans, the transformers were previously removed. The pavement in this enclosure was observed to be in poor condition with numerous cracks. As discussed above in *Section 4.4*, three transformers were removed by National Grid from this area in or before 2006.

Adjoining Properties

The former ALCO property was located to the west, south, and east of the subject site. Remediation activities, including soil capping, were currently in progress for this property. In addition, this property is located down- and side-gradient of the subject site.

Controlled Substances

No evidence indicating the presence or past presence of controlled substances, as defined in the Controlled Substances Act (21 U.S.C. 802), was observed at the subject site during the inspection conducted for the *Phase I ESA*.

6.2 Interviews

Owner/Key Site Manager

This assessment included an interview with Mr. Barnaby Evans of WaterFire Providence. Mr. Evans was interviewed by Mr. Hubbs of Fuss & O'Neill during the Phase II ESA activities conducted at the subject site on October 16, 17 and 18, 2012. Information provided by Mr. Evans is presented throughout this report.

6.3 Non-Scope Considerations

In August 2011 Fuss & O'Neill conducted a visual investigation of the subject site building to serve as a preliminary inventory of potentially hazardous building materials. The results of this inspection, as documented in the September 2011 *Phase I ESA*, identified suspected ACM, suspected LBP, and bulk materials (caulk, electrical equipment, window glazing, etc.) that may contain PCBs throughout the subject site building.

In October 2012, Fuss & O'Neill conducted a more comprehensive hazardous building material inventory and sampling program to identify hazardous building materials. The sampling program will be documented in a forthcoming *Hazardous Materials Assessment Report* that will be included in the forthcoming *Site Investigation Report* and is expected to confirm the presence of ACM, LBP and PCB-containing bulk materials in the subject site building.

7 Tier I Vapor Encroachment Screening

A Tier I VES was performed in accordance with ASTM Practice E 2600-10 to evaluate if a VEC existed at the subject site. The subject site (target property) was located in a commercial and light industrial area, and we understand that WaterFire Providence plans to renovate the subject-site building for use as their headquarters.

The subject site's building was heated by No. 2 fuel oil stored in a UST located to the west of the site building. Site Investigation (Phase II ESA) activities conducted by Fuss & O'Neill in October 2012 indicated that the size of the UST was approximately 10,000 gallons. In addition to the active UST, two historical USTs reportedly existed at the subject site. However, no evidence of a release of petroleum to the environment was identified during Phase II ESA activities conducted at the subject site in October 2012.

Files of federal, state, and local agencies were reviewed for environmentally-related issues pertinent to the subject site and nearby parcels, such as permits, inspection reports, enforcement history or documented releases of hazardous materials that could cause a VEC at the site. The sources of information listed in the following table were reviewed to identify the site and properties of concern within the minimum search distance around the site specified by ASTM Practice E 2600-10.

Information Source*	Search Distance: Chemicals of Concern	Search Distance: Petroleum Hydrocarbon Chemicals of Concern
Federal Files		
National Priorities List (NPL)	0.33 miles	0.10 miles
Delisted NPL Sites	0.33 miles	0.10 miles

State Institutional Control List	property only	property only

*Fuss & O'Neill used EDR, an environmental database search service, to obtain the information referenced in the above table. EDR provides access to publicly available environmental databases maintained by various Federal, State, and local agencies. A copy of the information provided by EDR relative to the subject site and nearby properties is included in *Appendix G*. The listed information sources are defined and described in detail in the EDR report.

The database review identified several releases at the subject site, and multiple properties with historical environmental releases were identified in the environmental databases within the minimum search radii required by ASTM Practice E 2600-10. Based on the documented releases at the subject site and the proximity of the off-site properties to the subject site, the potential for a VEC at the site associated with

documented off-site releases cannot be ruled out. However, the Phase II ESA activities conducted by Fuss & O'Neill during October 2012 included the collection of soil vapor samples from beneath the concrete floor slab of the subject-site building. The results of the soil vapor sampling program will be documented in a forthcoming *Site Investigation Report* and are not expected to support the existence of a potential vapor intrusion source beneath the building.

8 Data Gaps, Findings and Conclusions

8.1 Data Gaps

Standard Practice E 1527-05 requires the identification and evaluation of data gaps, which are defined as a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. No data gaps that significantly inhibited our ability to identify RECs at the subject site were identified during the completion of this investigation.

8.2 Findings and Conclusions

Fuss & O'Neill prepared this *Phase I ESA* report in general conformance with the scope and limitations of ASTM Practice E 1527-05. Any exceptions to, or deletions from, this practice are described in *Appendix A* of this report.

Based on the ESA update tasks summarized herein, the status of each of the RECs identified in the September 2011 *Phase I ESA* was evaluated. This assessment has revealed no evidence of RECs in connection with the subject site except for the following:

REC #1 – Historical Site Use: Historical industrial activity at the subject site, including the use and storage of hazardous materials, may have led to releases of OHM at the site. According to Sanborn mapping, Mr. Evans, and previous site investigations, the subject property was a part of the ALCO complex until 1918 and then part of the U.S. Rubber complex from 1918 through 1967. Materials stored on-site during this time included sodium hydroxide, paint thinner, lubricating oil, and mineral spirits. In addition, two rail lines entered the building from the east. C O Hoffacker, who rebuilt heavy machinery and machine tools, operated at the site from the 1970s through the mid 1990s. Oil and cooling fluids were used on-site at this time. The Site Investigation conducted at the site in October 2012 identified the following contaminants in environmental media at the subject site:

- Metals and SVOC were detected in soil samples at levels above the RIDEM I/C-DEC throughout the site. These exceedances are attributed to the presence of fill materials comprised of brick, concrete, asphalt, coal, and ash that was deposited site-wide at depths of up to eight fbg.
- VOC (vinyl chloride) was identified in a groundwater sample collected from a monitoring well located south of the loading dock on Parcel A at a level above the RIDEM GB-GO.

REC #2 – Transformers: A transformer pad was observed on the exterior of the southeastern portion of the building. The transformers were reportedly removed from this area by National Grid in or before 2006. Based on their potential age, these transformers potentially contained PCBs. The results of the October 2012 Site Investigation indicated that PCBs were identified in surface soil at levels above the RIDEM I/C-DEC and GB-LC adjacent to the concrete pad that formerly supported the electrical transformers.

The September 2011 *Phase I ESA* identified four additional RECs that were evaluated by the Site Investigation conducted at the site in October 2012. Based on these results, which will be documented in a forthcoming *Site Investigation Report* and summarized in *Section 2.3.4* herein, the following concerns are no longer considered RECs:

USTs: One 3,000-gallon No. 2 fuel oil UST and one 800-gallon No. 2 fuel oil UST were reportedly removed from the subject site, and one 10,000-gallon fuel oil UST was currently located at the site. The Site Investigation conducted in October 2012 did not identify evidence of a release of petroleum to the environment in samples collected from the vicinity of the former or current USTs.

Documented Release of Contaminants in Soil: The December 1993 release notification indicated that TPH and VOC contamination was present in surficial soil at the site in the vicinity of the former 4,000-gallon UST. Further testing documented in the *Site Characterization Report* indicated that no compounds were detected in soil samples that exceeded RIDEM criteria. RIDEM issued a letter requiring no further action regarding this release. The Site Investigation conducted in October 2012 did not identify evidence of a release of petroleum in samples collected from the vicinity of the former 4,000-gallon UST.

Indoor Trenches and Floor Drains: Several drains and trenches sealed with concrete and one open, grated trench was observed during the site inspection. Previous investigations indicated that most of these drains discharged to the municipal sewer system. However, records documenting the nature and usage of these systems and their ultimate discharge points were not available in files reviewed for this *Phase I ESA*. The Site Investigation conducted in October 2012 did not identify evidence of a release in samples collected from the vicinity of the drains and trenches. The GPR survey conducted as part of the October 2012 Site Investigation supported the conclusion that the exterior structure south of the building was a dry well.

While not specifically identified as RECs, we identified the following concerns which may have the potential to impact current or future uses at the subject site:

Hazardous Building Materials: A hazardous building-materials sampling program conducted in October 2012 confirmed the presence of ACM, LBP and PCB-containing bulk materials in the subject site building. Appropriate management and disposal of these materials and other building materials contaminated with these hazardous substances should be considered as part of any future construction or renovation activities at the site.

Proximal Release Properties: Properties within close proximity to the subject site have been impacted by releases of OHM. The ALCO property, located downgradient of the site, was impacted with releases

of OHM to soil and groundwater, including metals and SVOC in soil in the immediate vicinity of the subject site that was attributed to urban filling practices. Remediation activities have been implemented at the ALCO property and are currently on-going. The subject site and surrounding ALCO property were once formerly both occupied and operated as one complex by U.S. Rubber Co. While contaminants released at nearby properties have the potential to migrate to the subject site, contamination that has migrated to the subject site from off-site sources may not be the responsibility of the site owner solely as a result of property ownership. However, such migrating contaminants have the potential to impact the environmental quality of the subject site.

Assessments for radon gas and mold were not conducted during this assessment. Furthermore, we did not specifically investigate the potential for the site to contain wetlands, endangered species, ecological resources or historic/cultural resources. These items would likely present little risk to subsurface conditions and would not result in the identification of RECs. However, they could be liabilities, especially during construction, renovation, or demolition projects. Additionally, environmental compliance or permitting issues were not considered during this investigation. However, the presence of the chemicals and hazardous building materials discussed previously may present environmental permitting and compliance issues and will, therefore, have cost considerations should building demolition or renovation activities be required in the future.

Fuss & O'Neill has followed the guidelines described in ASTM E1527-05 to identify the RECs at this site in a manner consistent with standard practice in the industry. However, as indicated in the ASTM standard, "No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, and the practice recognizes reasonable limits of time and cost."

8.3 Additional Investigation to Identify RECs

In accordance with Section 12.6.1 of ASTM Standard Practice E 1527-05, the appropriateness of additional investigation necessary to determine the presence or absence of identified RECs was evaluated. Based on the opinion of the Environmental Professionals, no additional investigations would be necessary to confirm that the conditions specified in *Section 7.2* are RECs in accordance with ASTM standards.

10 Limitations of Work Product

This document was prepared for the sole use of the Rhode Island Department of Environmental Management the only intended beneficiaries of our work. Those who may use or rely upon the report and the services (hereafter "work product") performed by Fuss & O'Neill, Inc. and/or its subsidiaries or independent professional associates, subconsultants and subcontractors (collectively the "Consultant") expressly accept the work product upon the following specific conditions.

1. Consultant represents that it prepared the work product in accordance with the professional and industry standards prevailing at the time such services were rendered.
2. The work product may contain information that is time sensitive. The work product was prepared by Consultant subject to the particular scope limitations, budgetary and time constraints and business objectives of the Client which are detailed therein or in the contract between Consultant and Client. Changes in use, tenants, work practices, storage, Federal, state or local laws, rules or regulations may affect the work product.
3. The observations described and upon which the work product was based were made under the conditions stated therein. Any conclusions presented in the work product were based solely upon the services described therein, and not on scientific or engineering tasks or procedures beyond the scope of described services.
4. In preparing its work product, Consultant may have relied on certain information provided by state and local officials and information and representations made by other parties referenced therein, and on information contained in the files of state and/or local agencies made available at the time of the project. To the extent that such files which may affect the conclusions of the work product are missing, incomplete, inaccurate or not provided, Consultant is not responsible. Although there may have been some degree of overlap in the information provided by these various sources, Consultant did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this project. Consultant assumes no responsibility or liability to discover or determine any defects in such information which could result in failure to identify contamination or other defect in, at or near the site. Unless specifically stated in the work product, Consultant assumes no responsibility or liability for the accuracy of drawings and reports obtained, received or reviewed.
5. If the purpose of this project was to assess the physical characteristics of the subject site with respect to the presence in the environment of hazardous substances, waste or petroleum and chemical products and wastes as defined in the work product, unless otherwise noted, no specific attempt was made to check the compliance of present or past owners or operators of the subject site with Federal, state, or local laws and regulations, environmental or otherwise.
6. If water level readings have been made, these observations were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in water levels may

occur due to variations in rainfall, passage of time and other factors and such fluctuations may effect the conclusions and recommendations presented herein.

7. Except as noted in the work product, no quantitative laboratory testing was performed as part of the project. Where such analyses have been conducted by an outside laboratory, Consultant has relied upon the data provided, and unless otherwise described in the work product has not conducted an independent evaluation of the reliability of these tests.
8. If the conclusions and recommendations contained in the work product are based, in part, upon various types of chemical data, then the conclusions and recommendations are contingent upon the validity of such data. These data (if obtained) have been reviewed and interpretations made by Consultant. If indicated in the work product, some of these data may be preliminary or screening-level data and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time and other factors.
9. Chemical analyses may have been performed for specific parameters during the course of this project, as described in the work product. However, it should be noted that additional chemical constituents not included in the analyses conducted for the project may be present in soil, groundwater, surface water, sediments or building materials at the subject site.
10. Ownership and property interests of all documents, including reports, electronic media, drawings and specifications, prepared or furnished by Consultant pursuant to this project are subject to the terms and conditions specified in the contract between the Consultant and Client, whether or not the project is completed.
11. Unless otherwise specifically noted in the work product or a requirement of the contract between the Consultant and Client, any reuse, modification or disbursement of documents to third parties will be at the sole risk of the third party and without liability or legal exposure to Consultant.
12. In the event that any questions arise with respect to the scope or meaning of Consultant's work product, immediately contact Consultant for clarification, explanation or to update the work product. In addition, Consultant has the right to verify, at the party's expense, the accuracy of the information contained in the work product, as deemed necessary by Consultant, based upon the passage of time or other material change in conditions since conducting the work.
13. Any use of or reliance on the work product shall constitute acceptance of the terms hereof.

Scope of Work and Restrictions

ALL APPROPRIATE INQUIRY PHASE I ESA SCOPE OF WORK

Fuss & O'Neill uses Standard Practice E 1527-05 as general standard for conducting *Phase I ESAs*. For consistency, this scope of work is generally presented based on the outline of our standard *Phase I ESA* report. The descriptions of the procedures and sources for obtaining the information for each section follow the section headings. As specified by Standard Practice E 1527-05, the scope of work described below allows for use of professional judgment to determine the extent to which specific sources are reviewed.

Unless otherwise specified, the following items are not considered in the course of completing an ASTM E 1527-05 *Phase I ESA*:

- Asbestos, Lead (paint/plumbing), Radon, Mold, Fluorescent Light Ballasts
- Wetlands, Ecological Resources, Historical/Cultural Resources
- Regulatory and Health & Safety Compliance
- Endangered species

These items typically present little environmental risk to the grounds of a site; however, these items may be liabilities during property transfer, regulatory audits, construction, renovation, or demolition projects.

1.0 Introduction

The objective of the ESA and the party that this ESA was conducted for are identified in this section.

2.0 Site Overview

2.1 Site Information

2.1.1 Property Location, Size of Parcel, and Site Plan

Review of USGS topographic maps, local assessor and zoning maps and property description cards, field observations and sketches, and, if available, plans provided by a contact for the subject site. A site plan is included that is derived from these sources.

2.1.2 Potable Water Supply and Sewage Disposal

Query the local Department of Public Works, local Engineering Department, appropriate local utilities, and/or other local municipal sources and/or a knowledgeable site contact.

2.1.3 Adjoining Land Use

Site reconnaissance and assessor's mapping.

2.2 Physical Setting of Site

2.2.1 Geologic and Physiographic Setting

Site reconnaissance, USGS topographic maps, and available geological maps.

2.2.2 Groundwater

Site reconnaissance, USGS topographic maps, and RIDEM *Rules and Regulations for Groundwater Quality*.

2.2.3 Surface Water

Site reconnaissance, USGS topographic maps, RIDEM *Water Quality Regulations*, and RIDEM *List of Impaired Waters* (303d List).

2.2.4 Location of Public Water Supply Sources

Site reconnaissance and mapping available in local departments queried as part of the ESA.

2.3 Previous Environmental Investigations

Provided by the appropriate site contact or identified by other means during the course of conducting the ESA.

3.0 Site History

Site reconnaissance, knowledgeable site contacts, aerial photographs available from RIGIS, Sanborn fire insurance maps and street directories provided by an environmental database search service (note that street directories are reviewed at approximately five year intervals, but may be reviewed at smaller intervals for multi-tenant properties), and local municipal sources (local municipal Building Department, Engineering Department, Planning and Zoning Department, Health Department, and Fire Marshal).

4.0 Federal, State, and Local File Review

4.1 Summary of Regulatory Database Information

Regulatory databases specified by Standard Practice E 1527-05 are reviewed using an environmental database search service.

The report provided by the environmental database search service is reviewed in detail. Sites that are inferred to present a significant risk to adversely impact the subject site are identified and explained within the ESA report. However, sites inferred to pose little risk to adversely impact the subject site are disclaimed within the attached environmental database search report.

4.2 RIDEM File Review

Limited RIDEM file information is provided for the subject site and nearby properties in an environmental database search report. Reviews of files maintained by RIDEM are not conducted unless specifically requested.

If a file review is to be conducted, files for the subject site and/or nearby properties are requested from the RIDEM Office of Technical and Customer Assistance. If available, these files are reviewed for pertinent information, which is either copied or noted.

4.3 Local File Review

Files for the local municipal Tax Assessor, Building Department, Planning and Zoning Department, Health Department, and Fire Marshal are reviewed.

5.0 User Provided Information

Information provided by the user as required by the practice is discussed in this section

6.0 Site Reconnaissance, Interviews and Non-Scope Considerations

Field observations the results of required interviews are discussed in this section. In addition, surveys conducted to identify non-scope considerations are addressed.

7.0 Data Gaps, Findings and Conclusions

Data gaps relevant to the identification of recognized environmental conditions are discussed. In addition, recognized environmental conditions are summarized in this section as well as recommendations for further investigation, if appropriate.

8.0 References

References used as part of the ESA are presented here.

Title:

VII. DESCRIPTION OF TANK(S) TO BE CLOSED

Tank No.	Age	Date Last Used	Volume	Construction Materials	Stored Material
1	unknown	unknown	500-gallons (EST.)	STEEL	#2 HEAVY OIL

* If there are more tanks being closed please list on an attachment.

VIII. LOCATION OF TANK(S) (Sketch diagram)

CLOSURE INFORMATION

Will tank(s) be excavated, cleaned and disposed of (Section 15.11)? YES NO
Specify method of tank cleaning: SQUEEGE + SUBMERGENT PADS or _____

If circumstances exist which inhibit excavation, you may request a UST Closure in Place. This request is subject to DEM approval. Are you requesting to close tank(s) in place? YES NO
Owner must submit supporting documentation providing specific details on the necessity to close in place and a detailed diagram must be attached to this application. Please note: There are additional requirements for determining tank integrity as detailed in the Closure in Place guidelines.

Specify whether cleaning will take place: ON-SITE OFF-SITE
If OFF-SITE, indicate location of final tank(s) cleaning (Name & Address): _____

Will tank(s) be rendered unfit for use and disposed of? YES NO
If YES, location for final tank(s) disposal: STATE LINE SCRAP, ATTLEBORO, MA

Will tank(s) be reused? YES NO
Please note: Reuse of a tank in the ground requires compliance with Section 12.03 of UST Regulations.

If tank(s) is to be reused, specify:
Proposed use: _____
Name & Address of intended user: _____

Describe the method to be used to empty the tank(s) prior to excavation: VAC-TRUCK

Describe the method to be used to remove the tank(s) from excavation: BACKHOE

Describe the method(s) to be used to properly and safely vent the tank(s) and properly make openings in the tank(s):
COMPRESSED AIR / VENTURI + DRY ICE

Please note: Appropriate venting must be carried out both before the cutting of any tank and before off-site transport of any tank which has not been completely cleaned per Rule 15.11(c) of the UST Regulations.

Describe the instruments used to verify that the tank(s) have been properly vented: HAZOPS / LEL METER
I WILL NOT CUT TANK ON SITE

Describe how any residues remaining in the tank(s) will be managed: PUMPS BY VAC-TRUCK

Have these tank(s) ever held non-petroleum, hazardous materials? YES NO
If yes, please list materials: _____

Have any of the tank(s) ever contained a product other than that listed in Section VII above? YES NO
If yes, please list tank # and material stored: _____

After the closure(s) have been completed on the aforementioned tank(s), will there be any underground storage tank(s) remaining in existence at this facility? YES NO

Will any new UST(s) be installed on the site? YES NO
If YES, please note: Prior written approval by DEM is required.

WASTE HAULER INFORMATION (if applicable)

Units transporting tank sludge and waste or tank(s) which require further cleaning must be permitted by DEM, Division of Waste Management, RCRA Section as Hazardous Waste Transporters.

Specify method for disposing of tank sludges or wastes generated by the cleaning process: VAC-TRUCK
TO TRANSPORT MATERIAL TO RECYCLING FACILITY

Name of Waste Hauler: WESTERN OIL CO
Address: 389i CHURCH ST City: PROVIDENCE State: RI Zip: 02906
DEM Waste Hauler Permit #: RI 326

XI. NOTIFICATION OF LOCAL FIRE DEPARTMENT

The authorized signature of the local fire department below indicates that the local fire officials have been notified that you are planning to close an underground storage tank(s) at the above location. **You must also notify the local fire department of the exact closure date after you have confirmed this date with DEM.**

Sup. Winthrop B. Medina

1492 Turks Head Building
Providence, RI 02903

Re: Site Characterization Investigation
475 - 485 Valley Street
Providence, RI
Job No. 4766

Dear Mr. Zavota:

In accordance with our contractual agreement dated March 28, 1994, Garofalo & Associates, Inc. (G&A) is pleased to submit the following Site Characterization Report for the above referenced property.

Test drilling and soils analysis performed as part of this investigation revealed no detectable levels of Volatile Organic Compounds, Total Petroleum Hydrocarbons, or Polychlorinated Biphenyls. However, a dry well was observed at the south side of the loading dock. G&A recommends that this well be closed in accordance with Rhode Island Department of Environmental Management Underground Injection Control regulations.

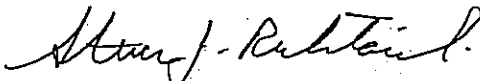

There were no other environmental encumbrances on the subject property which would preclude its sale, development or financing. Site conditions are discussed in further detail in the Conclusions and Recommendations section on page 12 of the report.

We appreciate this opportunity to provide you with our services and look forward to being of assistance in the future. If you should have any questions concerning the contents of this report or if we can be of additional service, please do not hesitate to contact us.

Respectfully Submitted,
GAROFALO & ASSOCIATES, INC.

Re: Site Characterization Report
for Japelo Realty, Peter Zavota
475 - 485 Valley Street
Providence, RI

Dear Mr. Crawford:

The following is in response to the comments regarding the above mentioned report, which were outlined in your letter dated 8 June 1994 to Mr. James E. Bilodeau, Jr. Responses to each comment are as follows:

1. The suspected drywell system noted on the west side of the loading dock has been determined to discharge to the municipal sewer system. Plans confirming this connection will be submitted under separate cover to the RIDEM's Underground Injection Control (UIC) section.
2. As indicated in the work plan approved by your department on March 21, 1994, soil samples exhibiting the highest PID readings were to be submitted for laboratory analysis. No detectable concentrations of volatile organic compounds (VOC) were detected in the samples collected from borings B1, B2 and B3. However, in order to characterize the subsurface conditions in the vicinity of the former underground storage tank (UST), a sample from B3 was submitted for laboratory analysis. Boring B3 is situated less than 10 feet south of the former UST and is believed to be downgradient of borings B1 and B2.
3. Due to the presence of a sewer connection and the location of the existing underground storage tank, the locations of the boreholes in the vicinity of the former UST were changed slightly from the approved work plan. In addition, borehole #6 was re-located approximately 8-10 feet to the northeast in order to characterize potential contamination from the suspected drywell.

June 20, 1994

Page -2-

4. Sample depths for each sample collected are as follows (please refer to Appendix B: Borehole Logs):

<u>Sample No.</u>	<u>Depth</u>
B1-01	0'-1'
B1-02	5'-7'
B1-03	10'-12'
B1-04	15'-17'
B2-01	0'-1'
B2-02	5'-7'
B2-03	10'-12'
B2-04	15'-17'
B3-01	0'-2'
B3-02	5'-7'
B3-03	10'-12'
B3-04	15'-17'
B4-01	0'-2'
B4-02	5'-7'
B4-03	10'-12'
B4-04	15'-17'
B5-01	0'-2'
B5-02	5'-7'
B5-03	10'-12'
B5-04	15'-17'
B6-01	0'-2'
B6-02	5'-7'
B6-03	10'-12'
B6-04	15'-17'

Chain of Custody forms are included with this letter.

On April 29, 1994, four samples (B3-03, B4-03, B5-03 and B6-03) were submitted to Cas Chem Laboratories for analysis. Sample B6-03 was damaged at the laboratory and a new sample (B6-04) was submitted in its place. From 4/27 until 5/5, all samples stored at Garofalo were placed in a refrigerator at 4 Degrees Celsius or less. Samples were submitted to the laboratory in appropriately sealed coolers during transportation. Laboratory error is responsible for exceeding the holding time for VOC analysis of sample B6-04. However, PID readings for this sample revealed no detectable concentrations of VOC's. TPH and PCB analyses for this sample are valid.

Dear Mr. Zavota:

I am very happy to enclose a telefax that we received from the division of site remediation of the department of environmental management.

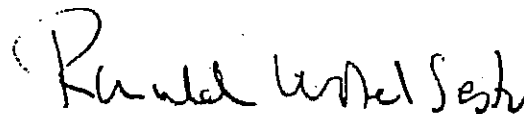

You will note that they say that,

...the Division will not require further action at this site under the Rules and Regulations for the Investigation and Remediation of Hazardous Materials Releases.

What this means is that you can now sell the land!

[Of course, department of environmental management reserves the right to require further studies should additional information be made known to them].

Sincerely,

kmh

PREFACE

All observations documented in this report were made under the conditions existing at the time of the site inspection, drilling and sampling. The recommendations and conclusions provided herein are based solely upon the scope of work conducted and the availability of information at this time. Any additional pertinent information concerning the subject site or the abutting parcels should be provided to Garofalo & Associates, Inc. (G&A) so that our recommendations and conclusions can be modified accordingly.

The intention of this study was to appropriately assess the characteristics of parcel number 263 of the Providence Assessor's Plat number 27, as they relate to the release or disposal of hazardous materials and petroleum products as per pertinent State of Rhode Island regulations. This evaluation does not document compliance by present or past site owners with federal, state, or local laws and regulations, nor does it claim or imply that all environmental problems past, present, potential, or otherwise, have been detected at the referenced site. The opinions stated in this report are based upon professional expertise; no other guarantee or warranty is implied within.

This report was prepared exclusively for Mr. Peter Zavota and should not be represented, reproduced, or disseminated without the approval of G&A. G&A acknowledges that the client shall use the report for the purpose of property transaction and may transmit the report to all appropriate parties involved in said transaction. No warranties other than those expressed in the contract for this project are expressed or implied.

INTRODUCTION

The subject site consists of a single lot situated south of the intersection between Valley Street and Wolcott Street, in the City of Providence, Rhode Island. According to records maintained by the Providence Assessor's Office, the property is identified as parcel number 263, as depicted on Assessor's Plat number 27. The site is irregularly shaped and encompasses 56,845 square feet in plan dimension. Site locus and lot location plans are included with this report, as Figures 1 and 2, respectively. Figure 1 illustrates the location of the property on the "Providence, RI" U.S.G.S. 7.5 Minute topographic quadrangle map at UTM coordinates 4633475N and 297850E.

Improvements on the subject site include a single story industrial building and asphalt pavement. The building is currently occupied by the "Hoffacker Company" (Hoffacker). The site is presently serviced by public water, sewer, electric and telephone utilities. Heat and power are provided by fuel oil and electricity, respectively.

SITE HISTORY

Based on records maintained by the Providence Assessor's office, the site has been under the ownership of Peter and Louis Zavota since December 31, 1985. Prior ownership of the subject property is listed as follows:

<u>Owner</u>	<u>Date Acquired</u>
Japelo Realty Co., Inc. (created from lot 85)	7-27-76
Wilkinson Co.	1-9-76
Uniroyal, Inc.	12-1-67
US Rubber Co.	5-1-18
American Locomotive Co.	11-1-02
Nathan A. Smyth	7-1-01
International Air Power	4-1-1899
RI Hospital Trust Co.	2-1-1898
RI Locomotive Works	3-15-1877

Based on information obtained from on-site personnel, Hoffacker has occupied the building since 1973, originally sharing space with "K.C. Hayes", a moving and storage company. Hoffacker apparently has been the sole occupant since the late 1970's.

According to Armstrong and Polk Directories for the City of Providence, Uniroyal, Inc. utilized the site from 1967 until the early 1970's. Prior to 1967, and dating back to 1918, the site and surrounding mill complex were part of the U.S. Rubber Company's Providence facility. Sanborn Fire Insurance Maps

of these materials. Most chemicals appear to be stored in secure, bermed areas. A complete list of the chemicals utilized on the site was not provided to G&A, however, primary chemicals used include: sodium hydroxide, paint thinner, lacquer, enamel, paints, lubricating oil, mineral spirits, etc.

Waste oil and semi-solid waste materials are stored in 55 gallon drums within the building, prior to disposal off-site. Wastewater generated from the parts cleaning operation is pretreated on-site prior to discharge to the municipal sewer system. The industrial discharge for the site is routinely monitored by the Narragansett Bay Commission.

Stainage of the concrete floor surfaces was noted throughout the building, however, the spills appear to have been cleaned and generally confined to the concrete surface. The majority of the stains are attributed to the leakage of lubricating oil from the various pieces of machinery.

Numerous floor drains and grates were also noted throughout the facility. All floor drains appear to have been appropriately sealed with concrete or metal sheeting. According to Mr. Salisbury, the majority of the drains discharged to the municipal sewer system. The floor drain located at the west side of the building, adjacent to the loading dock, apparently discharged to the dry well noted on the exterior of the property.

Storage Tanks

The facility is currently registered with the Rhode Island Department of Environmental Management (RIDEM) Underground Storage Tank Program and has been issued the identification number 3464.

According to records maintained by the RIDEM, a 3,000 gallon underground fuel oil tank was installed at the northwest side of the building on December 29, 1992. This tank replaced a 4,000 gallon underground storage tank which was removed on June 11, 1993. Tank installation and removal was performed by E.R. Pickett Co., Inc. under the supervision of RIDEM personnel. Moderate corrosion of the removed tank was noted, however, no holes were observed. No visual or olfactory evidence of soil contamination was noted and no further action was required at the time of closure. A copy of the application for tank installation and the UST closure certificate are included in Appendix B.

Subsurface Conditions

Investigatory Methods

Subsurface conditions were explored by drilling six (6) test borings on the site. All work was performed in accordance with a RIDEM approved work plan, which is included in Appendix C. Borings B-1 B-2 and B-3 were placed in the vicinity of the former underground tank and borings B-4, B-5 and B-6 were placed within the areas of stained asphalt in the vicinity of the loading dock. Boring B-6 was located approximately 10 feet downgradient of the dry well. Soil samples were collected with a split spoon sampler at approximate 5 foot intervals. All samples were screened for volatile organic compounds, in the field, with a portable photoionization detector (PID). Test boring locations are shown on Figure 3, and the borehole logs are included in Appendix D.

Groundwater was encountered in all of the boreholes at a depth of approximately 9.0 feet below grade.

Four selected soil samples, exhibiting the highest PID readings, were promptly submitted to Cas Chem Laboratories for analysis. Each sample was analyzed for Total Petroleum Hydrocarbons (Method 418.1), Volatile Organic Compounds (Method 8240) and Polychlorinated Biphenyls (Method 8080). The results of the laboratory analyses are included in Appendix E.

Soil Conditions

Photoionization readings indicated concentrations of volatile organic compounds (VOCs) ranging from 0 to 4.40 parts per million. However, laboratory analysis revealed no detectable concentrations of Volatile Organic Compounds, Total Petroleum Hydrocarbons or Polychlorinated Biphenyls.

Offsite Conditions

The subject property is situated in an area zoned "M-1" for manufacturing use. The subject site and surrounding properties consist of industrial, commercial and residential facilities.

Situated across Valley Street to the north are the "Hallamore Transportation Company", "Bigelow Autobody", "Valley Street Autobody", and residential property. Abutting the property to the east is "Visions Company", a water purification specialist. Vacant industrial land abuts the site to the west and south.

A review of RIDEM files indicates that two underground storage tanks were removed from the Hallamore property after failing precision tests. However, in a letter dated February 24, 1993, no further action was required based on the results of a closure assessment performed by Coneco Environmental and RIDEM personnel observations.

SITE RESEARCH

The RIDEM maintains a record of one incident of concern occurring at the subject site. On December 8, 1993, the RIDEM Division of Site Remediation was notified that a release of hazardous material occurred on the subject property. Samples collected by Inland Waters revealed the presence of petroleum contamination and trace levels of volatile organic compounds in the surface soil media. Overflow from fuel oil deliveries was considered a potential source of the contamination. A RIDEM Letter of Responsibility (ERB No. 93-048) was issued to the property owners on December 23, 1993. The letter indicated that a Site Characterization Report and subsurface investigation were to be performed and the results submitted to the Department. A copy of the Inland Waters Laboratory Results and the RIDEM Letter of Responsibility are included in Appendices F and G, respectively.

There are records of several other minor incidents which have occurred within a one mile radius of the site, however, considering distance and the spill volumes involved, it is highly unlikely that these would have any adverse environmental impact on the subject site.

There are no CERCLIS sites situated within a one mile radius of the subject site. CERCLIS sites are suspected or confirmed

hazardous waste disposal sites under investigation by the U.S. Environmental Protection Agency.

According to maps maintained by the Rhode Island Department of Environmental Management (RIDEM), groundwater in the vicinity of the site is classified as "GB". "GB" class groundwaters are presumed to be unsuitable for drinking water use without pretreatment. This should be of no concern since the site and surrounding properties are connected to piped public water.

The Providence Fire Department has no records of fires or other incidences of environmental concern for the site.

Flood Plain Maps (FEMA, 1986) indicate that portions of the property are located in Zones A and B; areas within the limits of the 100 and 500 year floods.

CONCLUSIONS AND RECOMMENDATIONS

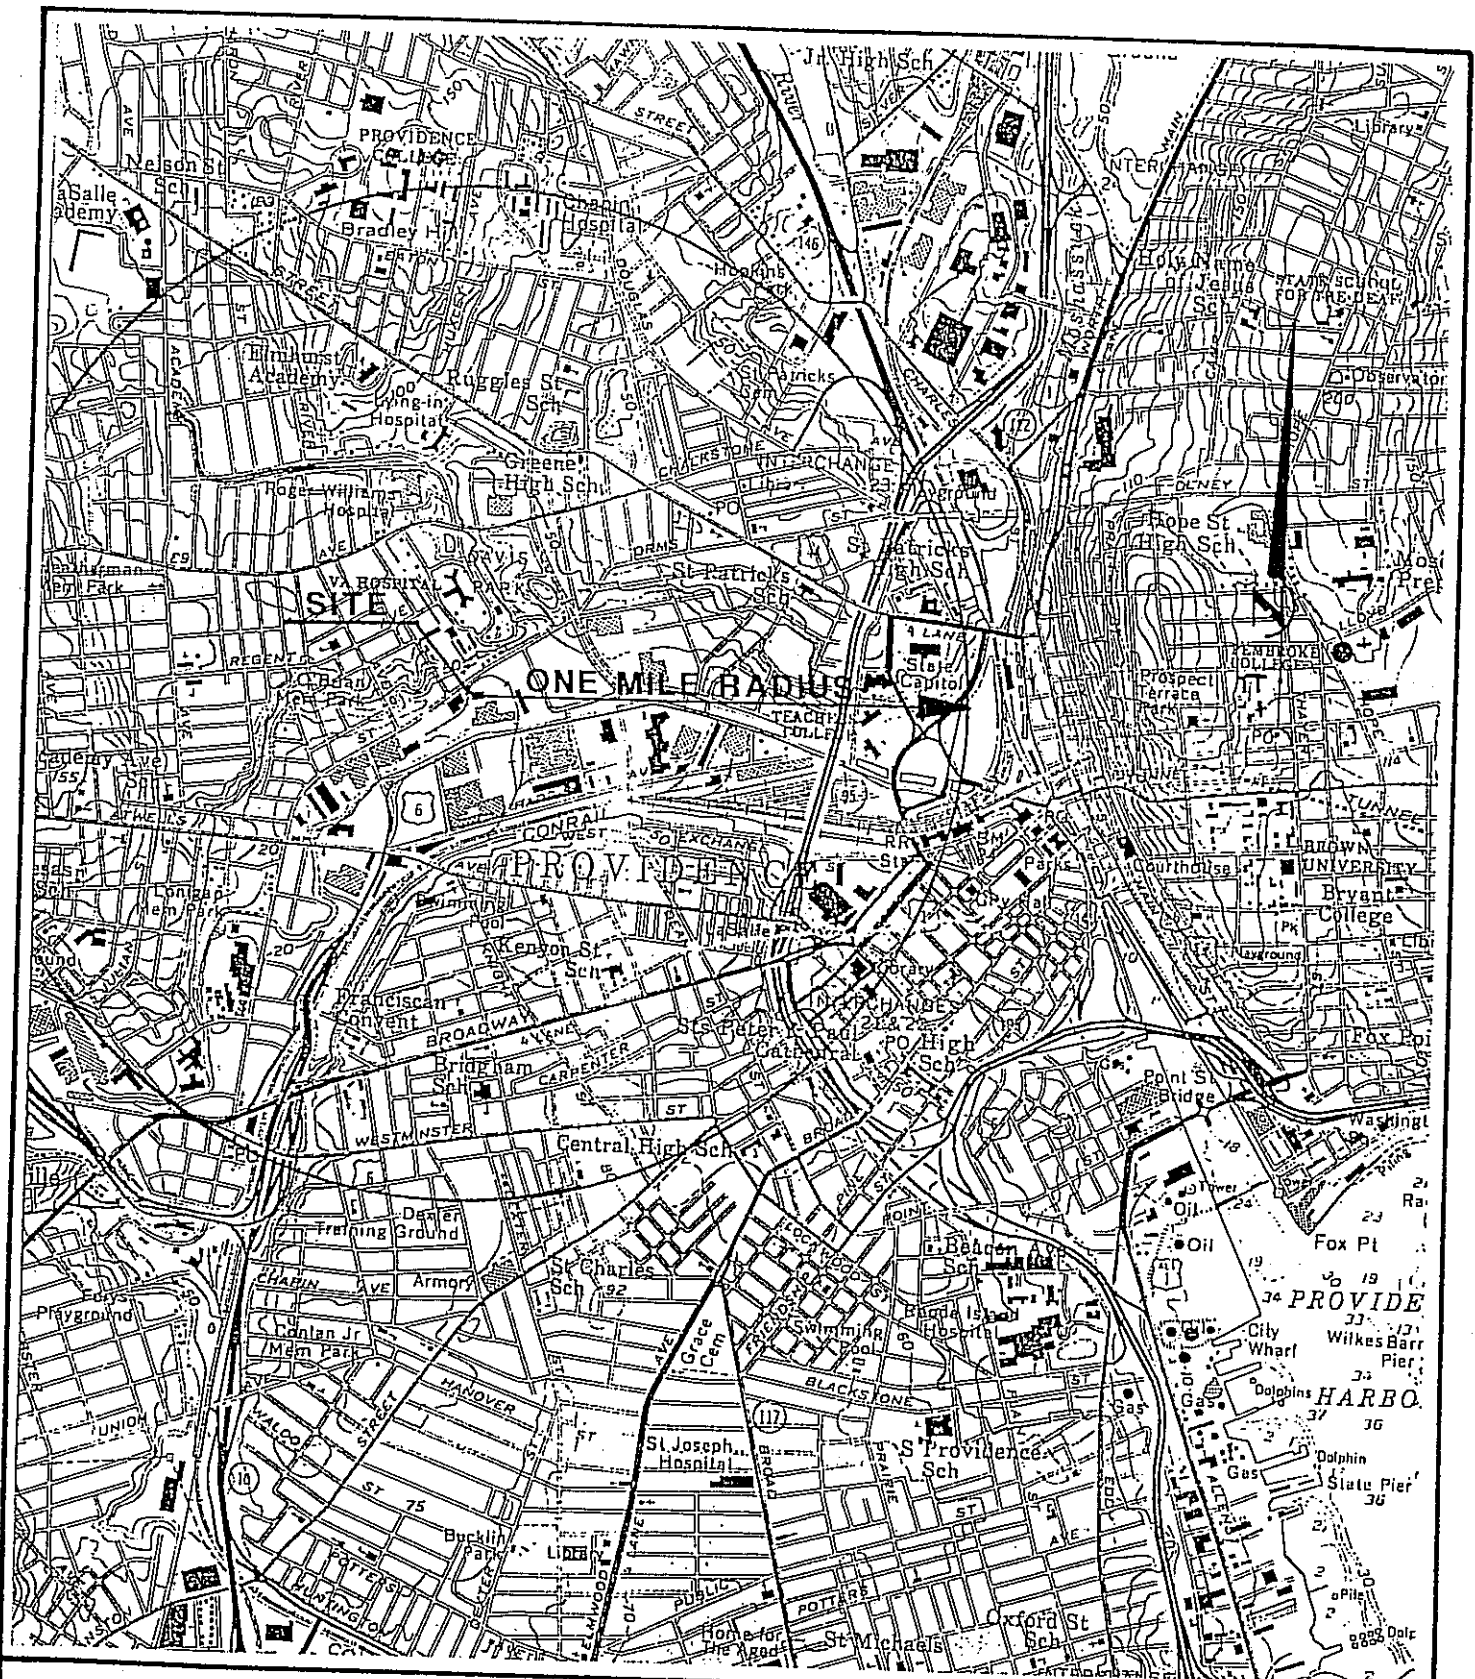

Based on the observations and data described herein, G&A concludes: 1) Test drilling and laboratory analysis performed as part of this investigation, revealed no significant petroleum hydrocarbon, volatile organic compound or polychlorinated biphenyl contamination in the vicinity of the former underground storage tank and loading dock areas; 2) Wastewater generated on-site is treated prior to discharge to the sewer system; 3) All floor drains present throughout the facility appear to have been appropriately sealed; 4) Three electrical transformers situated at the southeast side of the building apparently do not contain PCBs; and 5) A manhole to a dry well was noted at the south side of the loading dock. A presently sealed floor drain within the building appears to have discharged to the dry well. Visual and olfactory evidence indicates that potentially contaminated sludge remains at the base of the dry well. A subsurface boring placed approximately ten feet downgradient of the well did not reveal evidence of contamination.

G&A recommends that the dry well be closed in accordance with the RIDEM Underground Injection Control regulations. There were no other environmental encumbrances on the subject property which would preclude its sale, development or financing.

Test drilling and soils analysis performed as part of this investigation revealed no detectable levels of Volatile Organic Compounds, Total Petroleum Hydrocarbons, or Polychlorinated Biphenyls. However, in order to comply with the Letter of Responsibility dated December 23, 1993, G&A recommends that a copy of this report be submitted to the RIDEM for their review and opinions regarding additional assessment.

The above recommendations and conclusions are based on our best engineering judgment at this time and are subject to revision pending additional information and/or recommendations by State or Federal agencies.

RE: Underground Storage Tank
Approval of New Installation - Facility I.D. 3464

Dear Mr. Zavota:

This office has reviewed and approved the plans and specifications for the new installation of one (1) 3,000 gallon underground storage tank, storing #2 fuel oil, at 485 Valley Street, Providence, Rhode Island.

Please note the following requirements:

- a) DEM shall be notified 48 hours prior to the tank installation.
- b) This letter of approval shall be valid for a period of one year from the above date.

If you have any questions, please feel free to contact the undersigned at 277-2234.

Sincerely yours,

A handwritten signature in cursive script that reads "Gregory Yekhtikian".

CLOSURE CERTIFICATE
FOR UNDERGROUND STORAGE FACILITIES

In compliance with Chapter 46-12 of the Rhode Island General Laws, as amended, and the Regulations for Underground Storage Facilities Used for Petroleum Products and Hazardous Materials,

JOPECO REALTY

owner/operator of an underground storage facility located at

485 VALLEY ST., PROVIDENCE

is issued this Certificate of Closure indicating that the storage tanks described below have been taken out of service permanently, in compliance with the Regulations for Underground Storage Facilities Used for Petroleum Products and Hazardous Materials.

TANK ID	VOLUME	STORED MATERIAL	DATE LAST USED	STATUS OF TANK

Department of Environmental Management

NOTE: This is not a document to approve or certify that tanks are/were safe or clean to transport.
Revised Oct. 1992

APPENDIX C: RIDEM Approved Work Plan

WORK PLAN

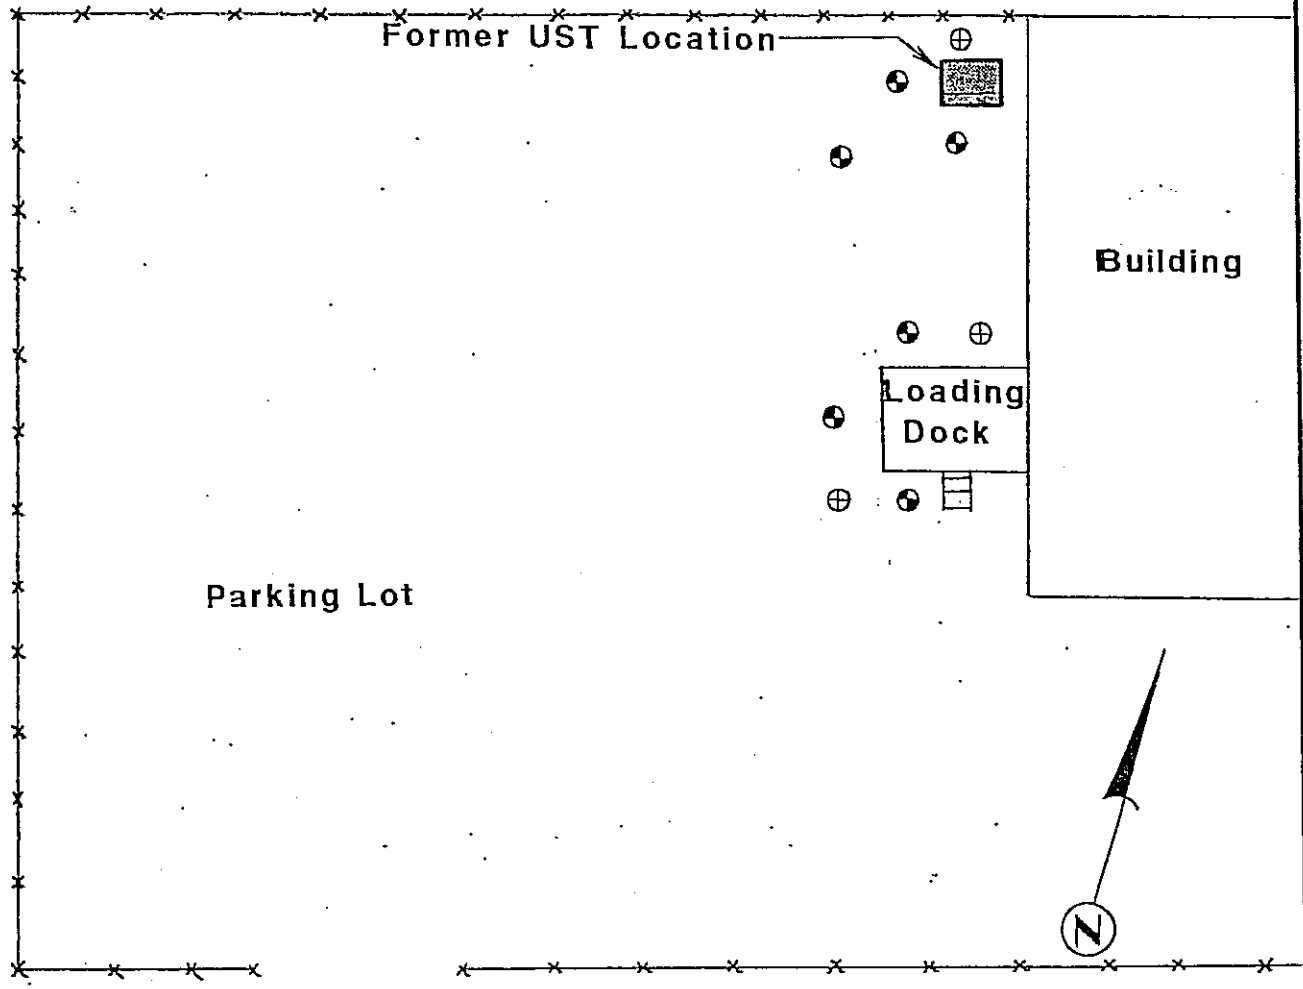

Site Characterization Investigation
475- 485 Valley Street
Providence, RI

In an attempt to determine the magnitude and extent of the soil contamination, previously identified in the vicinity of the former underground fuel oil storage tank and loading dock, G&A will conduct the following investigation:

1. G&A will obtain the services of a drilling contractor to install 6 boreholes within the areas of concern. If time and drilling conditions permit, additional boreholes may be added. The proposed locations of the boreholes are identified on Figure 1. On-site operations will be performed under the criteria established for Level D Personal Protection. Personnel are required to have the necessary equipment to upgrade to Level C, if conditions warrant.
2. Soil samples will be secured at the surface and subsequent 5 foot intervals during drilling, by our engineers, via split spoon sampling. Sampling procedures will adhere to the protocol established by ASTM D1586-84. Samples will be field screened for volatile organic compounds (VOC's) using a photoionization detector (PID).
3. Four select soil samples, exhibiting the highest PID readings, will be laboratory analyzed for volatile organic compounds (Method 8240), Polychlorinated Biphenyls (Method 8080) and Total Petroleum Hydrocarbons (Method 418.1). Analysis will be performed by Toxikon Corporation, a Rhode Island certified laboratory.
4. G&A maintains an in-house QA/QC Program which includes sampling protocol designed to minimize sources of error in each stage of the sampling process, from sample collection to analysis and reporting of analytical data. Additional QA/QC procedures must be followed in the laboratory.
5. G&A will provide an interpretation of the analytical results, a log of observations, and conclusions and recommendations for additional assessment, if necessary, in the form of a technical report. This report will be designed to meet the criteria established in the Rhode Island Department of Environmental Management's Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases, DEM-DSR-01-93.

RE: Work plan for Japelo Realty site
Valley Street, Providence
March 16, 1994

Dear Mr. Bilodeau:

This Division has received and reviewed the abovementioned work plan which was submitted on behalf of your clients and in response to the LOR #93-048. The Division concurs with the work plan and requests that your clients proceed as soon as possible with the implementation of the plan. Please notify the Division 48 hours prior to the start of field work. Also, your clients are reminded that the Site Characterization report is due at the Division on or about 30 April 1994.

Sincerely,

Jeffrey Crawford
Principal Engineer

APPENDIX G: RIDEM Letter of Responsibility

STATE OF RHODE ISLAND AND PROVIDENCE PLANTATIONS

Department of Environmental Management
DIVISION OF SITE REMEDIATION
291 Promenade Street
Providence, R.I. 02908-5767

LETTER OF RESPONSIBILITY
ERB No. 93-048

CERTIFIED MAIL

23 December 1993

RE: Plat Lot Valley Street, Providence

Dear

On 31 March 1993 the Rhode Island Department of Environmental Management (the Department) enacted: Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (the Regulations). The purpose of these Regulations is to create an integrated program requiring reporting, investigation and remediation of sites in order to eliminate and/or control threats to human health and the environment in a timely and cost-effective manner. A copy of these regulations are enclosed.

Please be advised of the following facts:

1. On 8 December 1993, the Division of Site Remediation was notified by certified letter that a release of a hazardous material occurred on property identified as Plat , Lot and located at Valley Street in Providence.
2. Laboratory analytical sampling data attached to the notification letter and which was obtained by Inland Waters indicates that petroleum contamination (6200 ppm) and trace volatile organic compounds were detected on site in the surface soil media.
3. On 21 December 1993, a Division representative met on site with you and your attorney to observe the sampling locations. At that time, you indicated that the Department's Underground Storage Tank section oversaw the removal and replacement of your building's fuel oil tank sometime during the past two years. You also indicated that overflow from fuel oil deliveries may have been the source

of the petroleum detection in the soil.

- 4. The detection of hazardous materials in the soil media meets the definition of a *release and source area* as defined by Rules 3.64 and 3.76 of the Regulations.
- 5. According to the City of Providence Tax Assessor's records, are the current owners of Plat . . . n Valley Street and as such, are *responsible parties* as defined by Rule 3.66 of the Regulations.

As a result of the information known about the site, the Department requests that you comply with the following:

- 1. Conduct and submit a Site Characterization report in accordance with Section 7.0 of the Regulations by 30 April 1994. Also at that time, submit copies of all laboratory analytical data from all actions which have taken place to date.
- 2. The Subsurface Investigation (dated 8/93) proposal submitted to you by ESS, Inc. should be revised to concentrate on the surface soil and subsurface soil contaminants near the former fuel oil tank and loading dock area. The Division recommends that all soil samples be analyzed at a minimum for Volatile Organic Compounds (VOC's), Total Petroleum Hydrocarbons (TPH) and Polychlorinated Biphenyl's (PCB's).

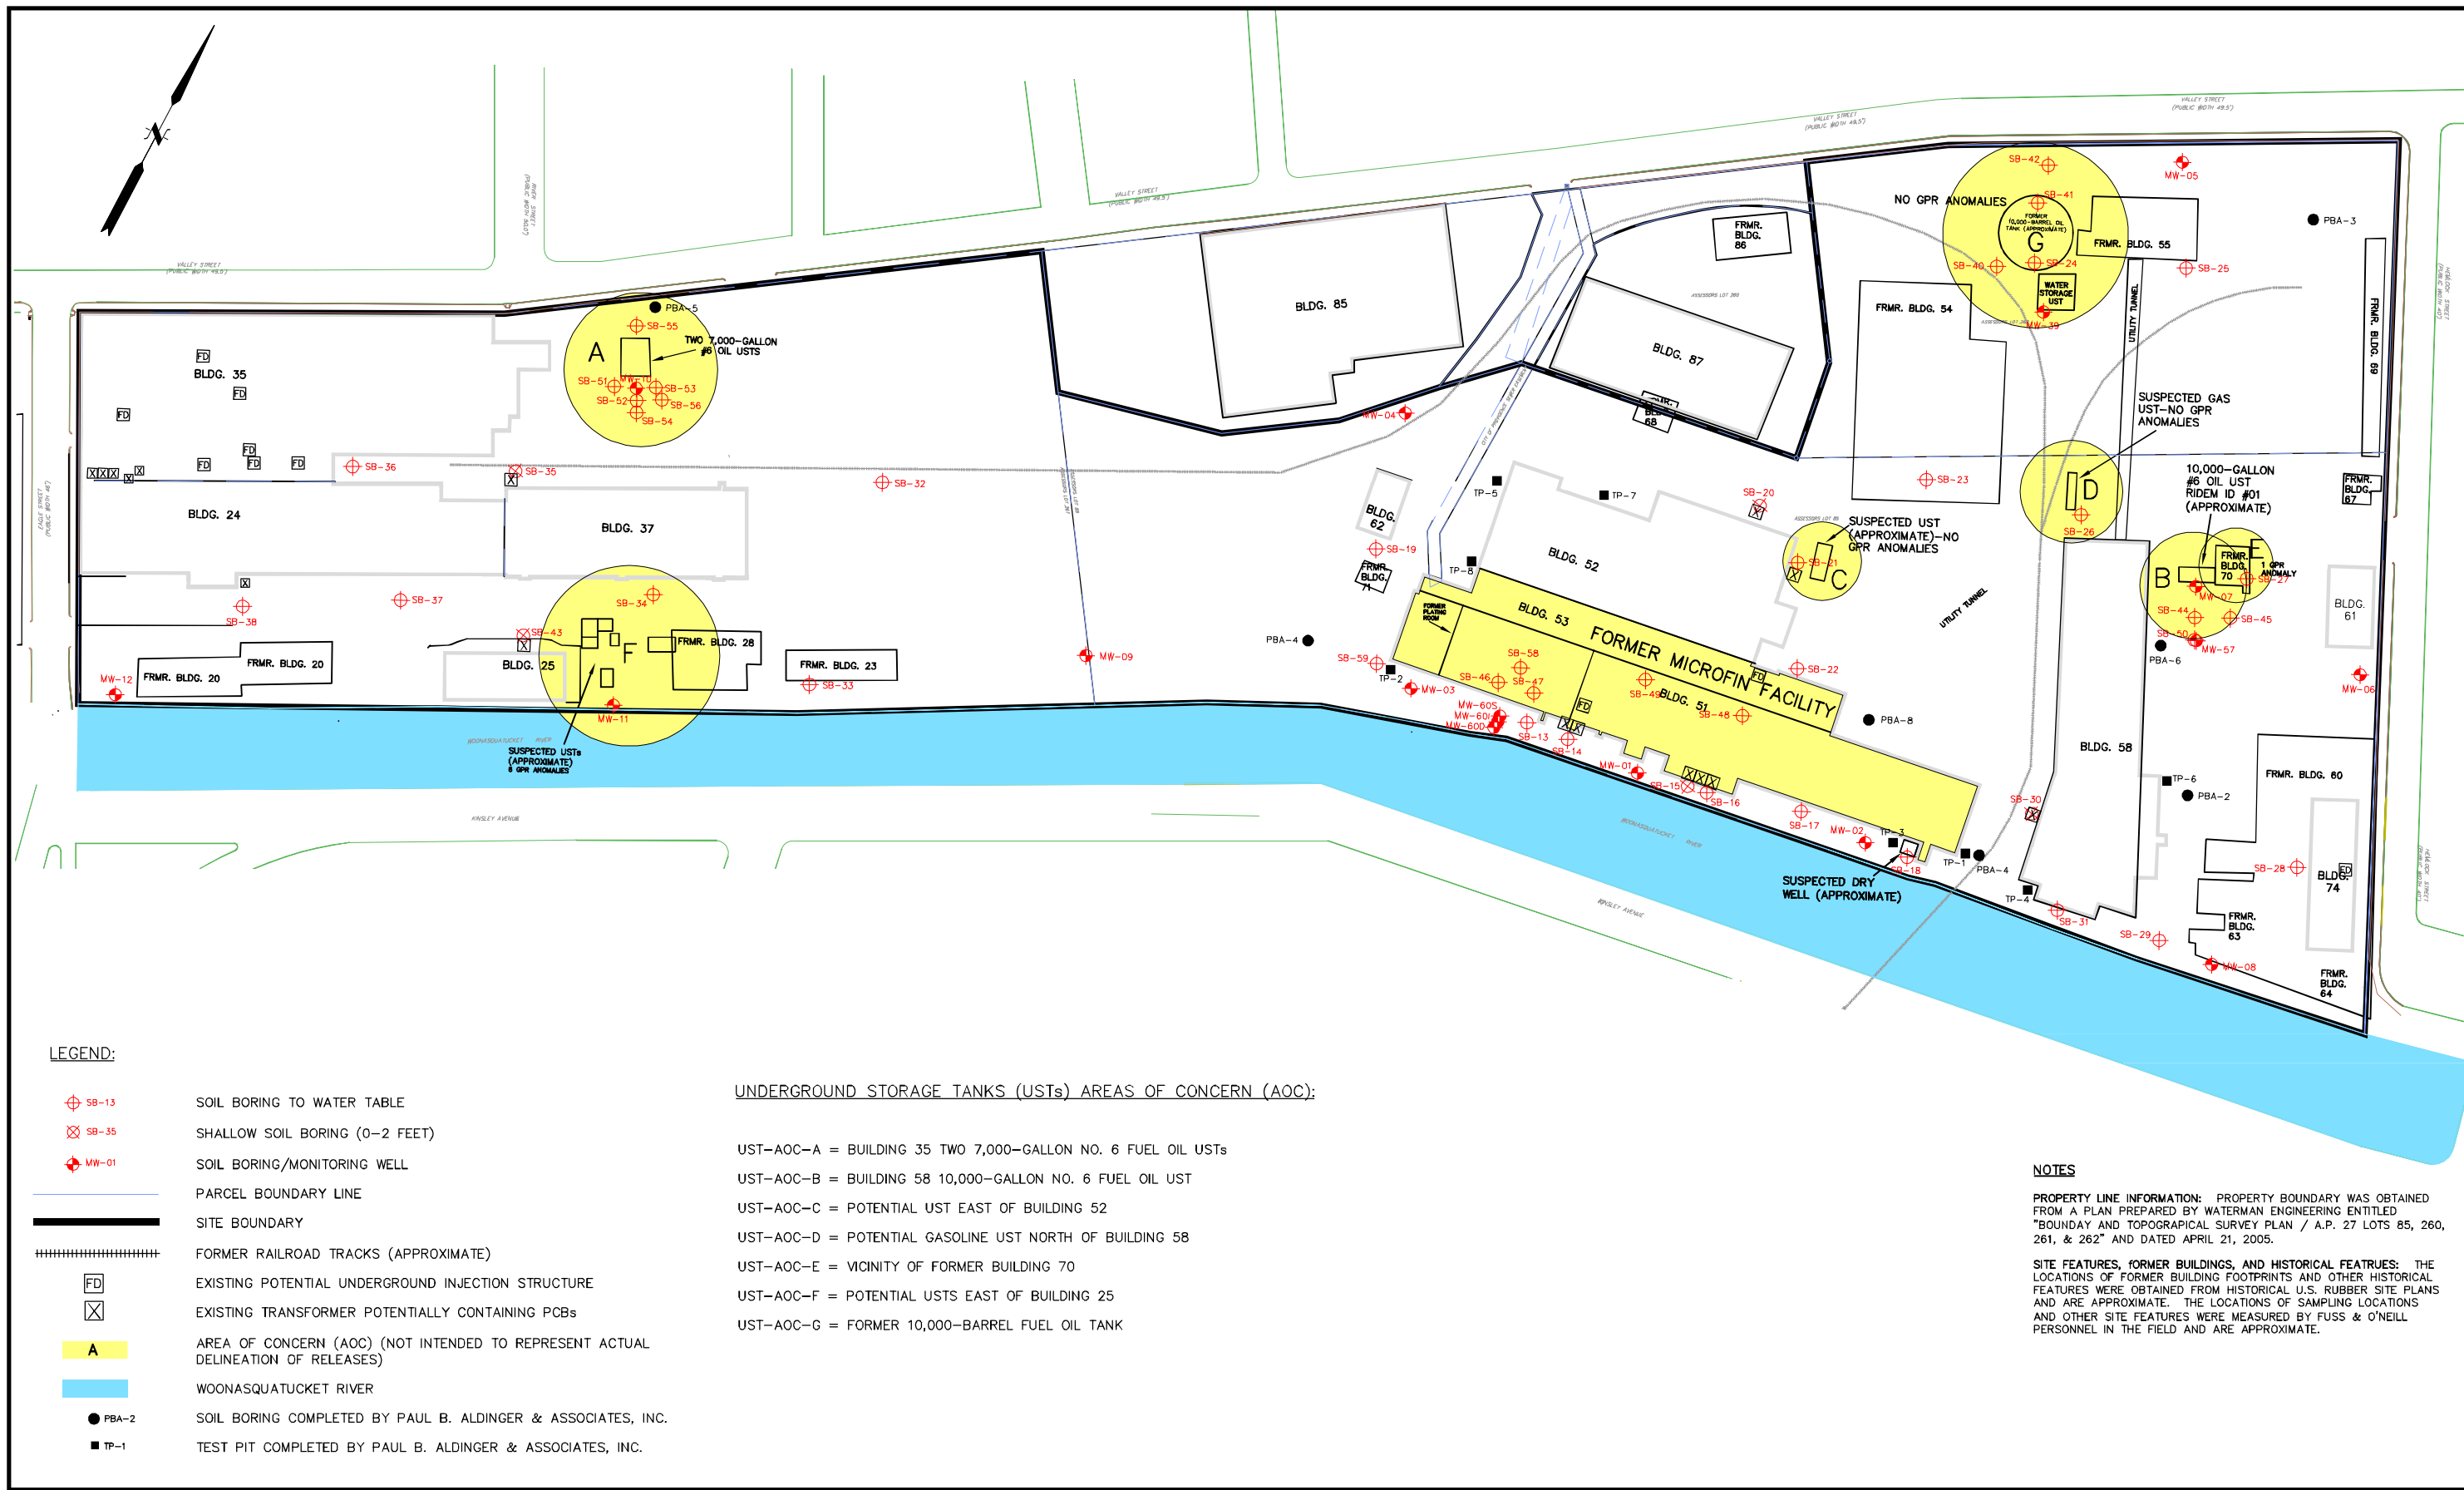

As responsible parties it is . . . responsibility for the proper investigation, handling and disposal of hazardous waste and hazardous materials located on the property. Failure to comply with the aforementioned items may result in further enforcement actions as specified in RI General Laws 23-19.1-17 and 23-19.1-18.

Please notify this office within seven days of the receipt of this letter of your plans to address these items. If you have any questions concerning this letter or if you would like the opportunity to meet with Department personnel, please contact me at 277-2797.

Sincerely,

Jeffrey Crawford

REMEDIAL DECISION LETTER

Mr. Carl W. Struever
American Locomotive Works, LLC
C/o SBER
1040 Hull Street
Suite 200
Baltimore, MD 21230

July 13, 2006

RE: ALCO 85, L.L.C., ALCO 261, L.L.C. AND ALCO 262, L.L.C.
Formerly American Locomotive Works and Microfin, Inc.
Properties at 68 Hemlock Street, 411 and 531 Valley Street
Plat 27 / Lots 85, 261 and 262
Providence, RI
CASE #2006-014

Dear Mr. Struever:

On 24 February 2004, the Rhode Island Department of Environmental Management (the Department) amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (the Remediation Regulations). The purpose of these regulations is to create an integrated program requiring reporting, investigation and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in a timely and cost-effective manner. A Remedial Decision Letter (RDL) is a formal Department approval of a remedy proposed by the performing party as a result of the findings of the Site Investigation.

The Department has the following documents on file in the matter of the above-referenced property (the Site):

Hazardous Material Release Notification Form (Release Notification) submitted on January 31, 2006 on the behalf of Licht Properties by Mr. John Chambers of Fuss & O'Neill, Inc.;

Site Investigation Report for the Former American Locomotive Works dated March 31, 2006 by Fuss & O'Neil;

Response to RIDEM Comments dated June 9, 2006 by Fuss & O'Neil; and

Soil Management Plan for ALCO 85, LLC, ALCO 261, LLC and ALCO 262, LLC dated July 12, 2006 by Fuss & O'Neil, Inc.

Collectively, these documents fulfill the requirements of a Site Investigation Report (SIR) as described in Section 7.0 of the Remediation Regulations. In addition, according to our records, public notice was conducted to all abutting property owners, regarding the substantive findings of the completed investigation. The opportunity for public review and comment on the technical feasibility of the proposed remedial alternatives commenced on June 22, 2006. The public comment period ended on July 6, 2006. No comments were received.

The Department therefore, offers its concurrence with the proposed preferred remedial alternative as stated in the approved SIR, which includes:

Remedial Alternative #2: Soil Capping, Limited Soil Excavation of Petroleum in Soil, Soil Vapor Extraction/Air Sparge System, and Funnel and Gate Groundwater-Permeable Reactive Barrier Remediation at Former Microfin Facility

Soil capping: To prevent direct exposure to the contaminants of concern in soil throughout the site, a soil cap would be placed over the existing soil. The soil cap would be constructed in accordance with typical RIDEM standards, and would consist of a combination of two feet of clean fill, one foot of clean fill overlying a geotextile fabric, asphalt pavement, or concrete over all areas of the site. An Environmental Land Usage Restriction (ELUR) and Soil Management Plan (SMP) would be established for the site that would control any necessary future disturbance of the soil cap.

Limited excavation of petroleum in soil: Observable soil containing petroleum, as identified in the vicinity of the former 10,000-barrel fuel oil tank (UST-AOC-G) would be excavated to the water table. The soil containing petroleum would be disposed of off-site at an approved facility or stabilized or recycled into asphalt and re-used on-site as sub-base material beneath the Department approved cap. The excavation would be capped in accordance with the soil cap specification described above to prevent direct exposure to soil in this area.

Soil vapor extraction (SVE)/Air sparge (AS) system beneath former Microfin facility: To treat the source area of VOCs in soil and groundwater as well as to prevent indoor air intrusion of vapors, a SVE/AS system will be installed beneath the former Microfin facility. Subsequent to the installation of the SVE/AS system, the existing floor of the facility will be sealed with a Liquid Boot™ sealant or equivalent and a new concrete floor will be poured.

Based on the results of the site investigation and the conceptual site model of the release mechanism in this area, the SVE system will be designed for the majority of

the Building 51 layout. The SVE system will serve to not only treat and remediate vadose zone soil containing VOCs, but will also prevent vapor intrusion of VOCs into the building. The SVE system is not proposed for the eastern portion of Building 51. However, the SVE system may be designed so that additional subsurface piping and a sub-slab ventilation system can be installed in this portion of the building prior to construction, if warranted. Details for this construction will be included in the RAWP.

The Air Sparge (AS) portion of the remediation system will be designed to treat groundwater containing VOCs beneath the western portion of the building in the primary source area. It will work in conjunction with the SVE system so that vapors containing VOCs generated by the AS system will be collected and treated by the SVE system.

Funnel and gate groundwater permeable reactive barrier remediation: In addition to the SVE/AS system that will treat the primary source area beneath the former Microfin facility, a funnel and gate permeable reactive barrier (PRB) will be installed hydraulically down gradient of the former Microfin facility but up gradient of the Woonasquatucket River. This system will direct shallow groundwater containing VOCs and hexavalent chromium toward a vertical wall of iron filings, and the PRB will be designed to treat the groundwater so that groundwater down gradient of the funnel and gate PRB will meet the RIDEM GB-GO. The PRB will be designed so that groundwater leaving the site at the down gradient property boundary in the former Microfin area will be in compliance with the GB-GO.

Environmental Land Usage Restriction (ELUR) with Soil Management Plan (SMP): An ELUR and SMP will be implemented to limit use of the property to restricted-residential, commercial, and industrial uses and to regulate maintenance of engineered controls. The ELUR and SMP will be recorded with the property deeds to require all future owners of the property to adhere to the restricted property use requirement. The ELUR will effectively limit potential direct exposure to SVOCs and metals at the site by regulating excavation or subsurface disturbance of the site. The ELUR will also require the site owner to adhere to inspection and reporting requirements.

The Department acknowledges that the site investigation activities are complete. American Locomotive Works, LLC has also stated to the Department that every effort is being made by American Locomotive Works, LLC to address and properly close all underground and leaking underground storage tanks, (and address any associated contaminated soils and groundwater on the site as well as any underground injection control systems) in accordance with the Department regulations. The Department also acknowledges that the abovementioned Soil Management Plan submitted to the Department shall be attached to

each of the Remedial Action Work Plans to be submitted as part of each Phase of remediation and re-development.

This RDL does not remove American Locomotive Works, LLC's obligation to obtain any other necessary permits from local, state or federal agencies.

The Department approved ELUR shall be recorded in the City of Providence's Land Evidence Records thereby limiting future use of the property. A recorded copy of the ELUR will be forwarded back to the Department for our files.

In accordance with Sections 8.0 and 9.0 of the Remediation Regulations, please submit a RAWP and a Draft ELUR and SMP for Department review and approval on or before **September 1, 2006**. The RAWP should describe all technical details associated with the implementation of the approved remedy. All of the subsections outlined in Section 9 of the Remediation Regulations must be included in order to facilitate an expedited review and approval of the RAWP. If an item is not applicable to this Site, simply state that it is not applicable and provide an explanation in the RAWP.

Pursuant to Rule 10.02 of the Remediation Regulations, an application fee for Remedial Action Approvals in the amount of one thousand (\$1,000) dollars must be made out to the **General Treasurer-State of Rhode Island** and remitted to this office. Review of the RAWP will not begin until the fee is received.

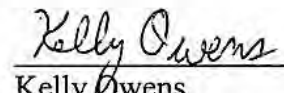

Upon review and approval of the RAWP and receipt of the remedial action approval application fee, the Department will issue an Order of Approval, at which time remedial activities may commence. If you have any questions or are in need of any clarification regarding this document, please contact me by telephone at (401) 222-2797 ext. 7102 or by e-mail at jeff.Crawford@dem.ri.gov.

Sincerely,

CASE #2006-014

Dear Mr. Brandle and Ms. Ashley:

Enclosed please find the Order of Approval (Order) for the Remedial Action Work Plan and Addendum for the above referenced facility. Please review the stipulations of this Order thoroughly to ensure your compliance with the requirements.

Please notify this office 48 hours prior to the beginning of any work related to the remediation of the Property. If you have any questions regarding this matter, please contact me by telephone at (401) 222-2797 extension 7102.

This Order shall be recorded in the land evidence records of the City of Providence as required by law, and a recorded copy must be returned to the Department within fifteen (15) days of recording.

Sincerely,

Jeffrey P. Crawford

RHODE ISLAND DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

In the matter of the application for Remedial Action Approval at:
68 Hemlock Street, Providence, Rhode Island
Plat 27, Lot 85 (the Site)
Case No. 2006-014

ORDER OF APPROVAL

In the above entitled matter wherein, ALCO 85, LLC, in its capacity as Performing Party and property owner for the remediation of the property located at 68 Hemlock Street, Providence, Rhode Island (Plat 27, Lot 85) has filed with the Rhode Island Department of Environmental Management (the Department) the following documents which collectively fulfill the requirements of Section 9.00 (Remedial Action Work Plan) of the Department's 2004 amended Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (the Remediation Regulations):

1. Remedial Action Work Plan-Former American Locomotive Works (Lot 85) dated August 2006 and received September 1, 2006 by Fuss & O'Neil;
2. Addendum-Remedial Action Work Plan (RAWP) Former American Locomotive Works (Lot 85) dated October 10, 2006 and received October 11, 2006 by Fuss & O'Neil;
3. Response to RIDEM Comments concerning the RAWP for Lot 85 dated November 1, 2006 by Fuss & O'Neil; and
4. Underground Injection Control Program Application for Order of Approval Permeable Reactive Barrier dated and received on November 1, 2006 by Fuss & O'Neil.
5. Response to Underground Injection Control Program Comments Application for Order of Approval dated November 17, 2006 by Fuss & O'Neil.

These documents describe a plan to remediate existing contamination pursuant to R.I. General Laws 23-19.14-1 et seq., the Department's Remediation Regulations, as amended February 2004, and the Underground Injection Control Program Rules and Regulations dated May 21, 1984 in accordance therewith.

Upon consideration thereof, the Office of Waste Management and the Office of Water Resources, UIC Program approve said plan or means to remediate contamination through this Order of Approval provided that:

1. All work, operations, activities, tests and schedules must be performed in accordance with the terms and conditions of this Order, the Department approved RAWP inclusive of schedules, Section 11.00 (Remedial Action) of the Remediation Regulations and all other applicable federal, state and local laws and regulations.
2. Work shall be initiated at the Site within forty-five (45) days of receipt of this Order and completed within ninety (90) days of initiation unless an alternate project schedule is approved by the Department.
3. No hazardous waste shall be accepted from any off-site sources for treatment or disposal at the Site.
4. Sampling and analysis of all media involved in the Remedial Action shall be conducted in strict accordance with the RAWP, UIC Program Application requirements of this Order, and the Remediation Regulations.
5. Results of the environmental sampling shall be sent to Jeff Crawford of the Office of Waste Management and Craig Roy of the Office of Water Resources, UIC Program 235 Promenade Street, Providence RI 02908.
6. The following Site remedy has been proposed and shall be implemented by ALCO 85, LLC and its consultant and shall incorporate the following:

Remedial Alternative #2: Soil Capping, Limited Soil Excavation of Petroleum in Soil, Soil Vapor Extraction/Air Sparge System, and Funnel and Gate Groundwater- Permeable Reactive Barrier Remediation at Former Microfin Facility

Soil Capping shall prevent direct exposure to the contaminants of concern in soil throughout the site by placement of a soil cap over the existing soil. The soil cap shall be constructed in accordance with typical RIDEM standards, and would consist of a combination of two feet of clean fill, one foot of clean fill overlying a geotextile fabric, asphalt pavement, or concrete over all areas of the site. A Department approved Environmental Land Usage Restriction (ELUR) and Soil Management Plan (SMP) shall be established for the site that would control any necessary future disturbance of the soil cap.

Limited excavation of petroleum in soil: Petroleum contaminated soil identified in the vicinity of the former 10,000-barrel fuel oil tank (UST-AOC-G) shall be excavated to the water table. The soil containing petroleum shall be disposed of off-site at an approved facility or stabilized or recycled into asphalt and re-used on-site as sub-base material beneath the Department approved cap. The excavation

shall be capped in accordance with the soil cap specification described above to prevent direct exposure to soil in this area.

Soil vapor extraction (SVE)/Air sparge (AS) system shall be installed beneath the floor area of the former Microfin facility and the future office of the RI Economic Development Corp. The SVE/AS system shall treat the source area of VOCs in soil and groundwater as well as to prevent indoor air intrusion of vapors. Subsequent to the installation of the SVE/AS system, the existing floor of the facility shall be sealed with a Liquid Boot™ sealant or equivalent and a new concrete floor shall be poured.

Based on the results of the site investigation and the conceptual site model of the release mechanism in this area, the SVE system shall be designed for the majority of the Building 51 layout. The SVE system shall serve to not only treat and remediate vadose zone soil containing VOCs, but shall also prevent vapor intrusion of VOCs into the building.

The Air Sparge (AS) portion of the remediation system shall be designed to treat groundwater containing VOCs beneath the western portion of the building in the primary source area. The AS system shall work in conjunction with the SVE system so that vapors containing VOCs generated by the AS system will be collected and treated by the SVE system.

ALCO 85, LLC and its contractor shall perform weekly sampling of the indoor air quality for laboratory analysis during the first 30 days to ensure that acceptable indoor air concentrations are being achieved. Copies of the weekly laboratory analysis shall be forwarded to the Department electronically for review and approval.

Funnel and gate groundwater Permeable Reactive Barrier remediation: In addition to the SVE/AS system that will treat the primary source area beneath the former Microfin facility, a funnel and gate permeable reactive barrier (PRB) shall be installed hydraulically down gradient of the former Microfin facility but up gradient of the Woonasquatucket River. The PRB shall be approximately 150 feet in length, approximately 3 feet in width and approximately 20 feet in depth. This system shall direct shallow groundwater containing VOCs and hexavalent chromium toward a vertical wall of ABC/ Zero Valent Iron (ZVI) iron filings, and the PRB shall be designed to treat the groundwater so that groundwater down gradient of the funnel and gate PRB shall meet the RIDEM GB- Groundwater Objective (GO). The proposed PRB design calls for the installation of the lower portion of the barrier wall (Phase 1) by subsurface injection of the ABC/ZVI followed by Phase 2 Trench Blending so that groundwater leaving the site at the down gradient property boundary in the former Microfin area shall be in compliance with the GB-GO. Any monitoring wells that may be affected by the project shall be replaced by the same number of wells downgradient of the PRB.

Environmental Land Usage Restriction (ELUR) with Soil Management Plan (SMP): A Department approved ELUR and SMP shall be implemented to limit use of the property to restricted-residential, commercial, and industrial uses and to regulate maintenance of engineered controls. The ELUR and SMP shall be recorded with the property deeds to require all future owners of the property to adhere to the restricted property use requirement. The ELUR shall effectively limit potential direct exposure to SVOCs and metals at the site by regulating excavation or subsurface disturbance of the site. The ELUR shall also require the site owner to adhere to inspection and reporting requirements.

6. The groundwater remedial objective shall be the Method 1 GB Groundwater Objectives, as defined in the Remediation Regulations, at all property boundaries and within 30 feet of all utility trenches.
7. Quarterly site status reports shall be submitted to the Department shall include the following information:
 - a. Results of SVE/AS Start Up and Routine Operation Monitoring;
 - b. Any confirmation soil sample results and groundwater analytical results;
8. All soil imported to the site to be used, as clean fill shall meet the Department's Method 1 Residential Direct Exposure Criteria. The imported soils to be used, as clean fill must be laboratory analyzed for arsenic at a frequency of one sample per 500 tons. Additionally, at least one quarter of the total number of samples must be laboratory analyzed for total petroleum hydrocarbons, VOCs, SVOC's and metals. The laboratory analytical results for the clean fill, along with a statement from the facility that provides the clean fill and/or loam attesting to the material's origin and suitability must be submitted to the Department for review and approval prior to placement.
9. Management of all Site soil shall be in strict accordance with Appendix B Soil Management Plan of the RAWP.
10. The Site shall be managed in the future through recording an approved Institutional Control in the form of an Environmental Land Usage Restriction (ELURs) for each parcel. A draft ELUR must be submitted to the Department for review and approval within thirty (30) days of completion of the remedial activities, exclusive of required monitoring. Within thirty (30) days of Department approval of the ELUR, the ELUR shall be recorded in the City of Providence Land Evidence Records. A copy (stamped with the book and page number) of the recorded Order shall be submitted to the Department within fifteen (15) days of recording.

11. The Site (Lot 85) is subject to long-term maintenance and annual inspection of the engineered controls and portions of the property subject to the ELUR. An environmental professional shall conduct the annual inspection and the associated certification shall be submitted to the Department.
12. Any portion of the RAWP conducted on the Site which falls under the jurisdiction of the Department's Office of Air Resources (OAR) shall be performed in compliance with all appropriate OAR Rules and Regulations, including but not limited to the monitoring and control of any air emissions and the terms and conditions outlined in the October 25, 2006 correspondence from the Office of Air Resources.
13. All waste derived from implementation of the RAWP shall be managed in accordance with the Department's Remediation Regulations, Rules and Regulations for Hazardous Waste Management, and Rules and Regulations for Solid Waste Management Facilities, and any other applicable local, state or federal regulations. Documentation of proper disposal shall be provided to the Office of Waste Management in the Preliminary Closure Report.
14. The Department shall be immediately notified of any Site or operation condition that results in non-compliance with this Order.
15. The Department shall be immediately notified in writing if the Performing Party or the representative consultant suspects or has reason to believe that any of the remedial objectives will not be met.
16. The Department shall be notified a minimum of five (5) working days in advance of any changes in contractors and/or consultants for the remedial activities in these RAWPs, and must be promptly supplied with complete contact information for each new contractor or consultant (including but not limited to company name and address, contact name and address, contact telephone number and e-mail address).
17. Any RAWP interruptions shall be reported to Jeff Crawford of the Office of Waste Management and Craig Roy of the Office of Water Resources by telephone at (401) 222-4700 extension 7102 and extension 7604 respectfully within one (1) working day and in writing within seven (7) days of occurrence.
18. Within ninety (90) days of the conclusion of the remedial activities, exclusive of required monitoring, a Preliminary Closure Report detailing the Remedial Action and current site status shall be submitted to the Office of Waste Management for review.

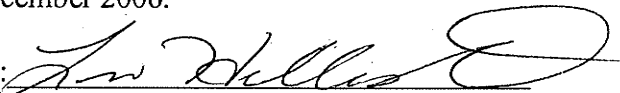

19. This Order does not remove the Performing Party's obligation to obtain any other necessary permits from other state, local, or federal agencies required to implement the RAWP in a timely manner consistent with the RAWP schedules and deadlines in this Order.
20. The Performing Party shall have this Order recorded in the City of Providence Land Evidence Records for the subject property within thirty (30) days of execution of this Order. A copy of the recorded Order (stamped with the book and page number) must be submitted to the Department within fifteen (15) days of recording.
21. ALCO 85, LLC and its consultant are aware of the Points of Compliance (Rule 8.08) requirements in the Remediation Regulations for offsite GB exceedences (if applicable). Rule 8.08 requires a Responsible Party(s) to meet compliance with the GB Soil Leachability Objectives and GB groundwater objectives for all contaminants of concern at the property lines and within an established footage of the underground utilities while also demonstrating that no risk to human health or the environment exists.
22. ALCO 85, LLC and its consultant shall perform all required confirmation soil testing to ensure compliance with the RDEC's and the GB Leachability Criteria.
23. Closure and removal of the remedial system(s) at the conclusion of the remedy will be contingent upon final Department approval.
24. Based upon the results of groundwater sampling and groundwater analytical data, the Department reserves its rights to require additional remedial at the Property to achieve final compliance at the site.

This Order shall remain in full force and effect provided that said RAWP is implemented in a manner satisfactory to the Department. Failure to comply with all points outlined in the Department approved RAWP and stipulated in this Order shall result in the revocation of this Order of Approval and may result in the issuance of a Notice of Violation and Order against the performing party(s).

This Order shall be subject to modification or revocation in accordance with law.

Entered as the Order of the Department of Environmental Management this 6TH day of December 2006.

RE: Remedial Action Work Plans ALCO 261, L.L.C. & ALCO 262, LLC
Former American Locomotive Works
Properties at 411 Valley Street and 531 Valley Street
Plat 27 / Lots 261 & 262
Providence, RI
CASE #2006-014

Dear Mr. Brandle and Ms. Ashley:

On February 24, 2004, the Rhode Island Department of Environmental Management's (the Department) Office of Waste Management (the Office) amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (the Remediation Regulations). The purpose of these regulations is to create an integrated program requiring reporting, investigation and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in a timely and cost-effective manner. A Remedial Approval Letter is a document used by the Department to approve remedial actions at contaminated sites that do not involve the use of complex engineered systems or techniques (i.e., groundwater pump and treat systems or soil vapor extraction systems).

The Office has received and reviewed the following documents:

Hazardous Material Release Notification Form (Release Notification) submitted on January 31, 2006 on the behalf of Licht Family Realty Associates (Lot 261) and The Emeline Company (Lot 262) submitted by Mr. John Chambers of Fuss & O'Neill, Inc.;

Remedial Approval Letter
ALCO 261, LLC
ALCO 262, LLC
411 and 531 Valley Street, Providence
Page 1

Site Investigation Report for the Former American Locomotive Works dated March 31, 2006 submitted by Fuss & O'Neill;

Response to RIDEM Comments dated June 9, 2006 submitted by Fuss & O'Neill;

Public Notice to abutters dated June 22, 2006 submitted by Fuss & O'Neill;

Soil Management Plan for ALCO 85, LLC, ALCO 261, LLC and ALCO 262, LLC dated July 12, 2006 submitted by Fuss & O'Neill, Inc.

Remedial Action Work Plan Lot 261 dated October 2006 and received October 13, 2006 submitted by Fuss & O'Neill for ALCO 261, LLC.

Remedial Action Work Plan Lot 262 dated October 2006 and received October 13, 2006 submitted by Fuss & O'Neill for ALCO 262, LLC

At this time, the Office of Waste Management offers its concurrence with these RAWP's which details the following remedial action at the properties:

Site-Wide Capping of Soil Containing SVOCs and Metals

The proposed soil remedy shall effectively cap the soil on the site. The cap will be comprised of a two-foot thickness of clean material, a one-foot thickness of clean material over a geotextile fabric, seven inches of clean material or recycled pavement product overlain by three inches of asphalt, and/or concrete foundation slab or pavers underlain by six inches of clean material. The cap will limit direct exposure to soil under the cap.

Specifically, the proposed soil remedy will consist of three types of engineered controls, implemented in three surface areas of the site. Cross-sectional depictions of the following engineering controls are depicted in the RAWP (Figure 3):

- 1) **Concrete Foundation Slab and Concrete Pavers:** Any native soil from the remediation site that is left beneath the foundation slab or concrete pavers for a proposed building or walkway will be effectively capped by six inches of clean fill plus the overlaying concrete slab or pavers.
- 2) **Paved Areas:** Native soil located beneath proposed paved areas will be capped beneath a minimum of ten inches of material comprised of at least three inches of asphalt pavement overlying seven inches of clean fill base material.

- 3) **Landscaped Areas:** Native soil beneath landscaped areas will be capped with two feet of clean soil or one foot of clean soil and a geotextile fabric. The geotextile fabric will be set on top of the native soil and beneath the clean material soil cap to act as a visual indicator of the soil cap/native soil interface.

Existing paved areas at the site that are not expected to be disturbed or re-graded during construction activities and existing building slabs/foundations may also act as a soil cap. On-site personnel should routinely maintain the existing pavement at the site so as to prevent direct exposure to native soil beneath the pavement.

Clean fill imported to the site shall be subject to the sampling and approval requirements as discussed in the RAWP and post construction SMP.

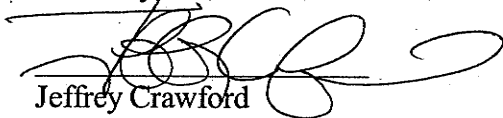

Environmental Land Usage Restrictions (ELURs)

ALCO 261, LLC and ALCO 262, LLC shall submit for review and approval an institutional control in the form of a Department ELUR with an associated SMP. The ELUR shall restrict future property use to restricted residential activities on Lot 261 and to commercial activities on Lot 262. Future disturbances at each of the properties shall require that the property owner follow post construction soil management procedures which shall be outlined in the attached Soil Management Plan (SMP)(Appendix C of the ELUR).

- Within thirty (30) days of completion of all the abovementioned remedial work, please forward a Closure Report inclusive of any disposal documentation and laboratory sampling analysis. Concurrently, submit a draft ELUR and SMP for each of the properties for review and approval. Upon approval by the Department of the Closure Report, ELUR and SMP, both ALCO 261, LLC and ALCO 262, LLC shall record the ELURs and SMP in the Land Evidence Records for the City of Providence and return a recorded copy of each document to the Department within 15 days of recording.

If you have any questions regarding this letter please contact me by telephone at 222-2797 (x7102) or by e-mail at jeff.Crawford@dem.ri.gov.

Sincerely,

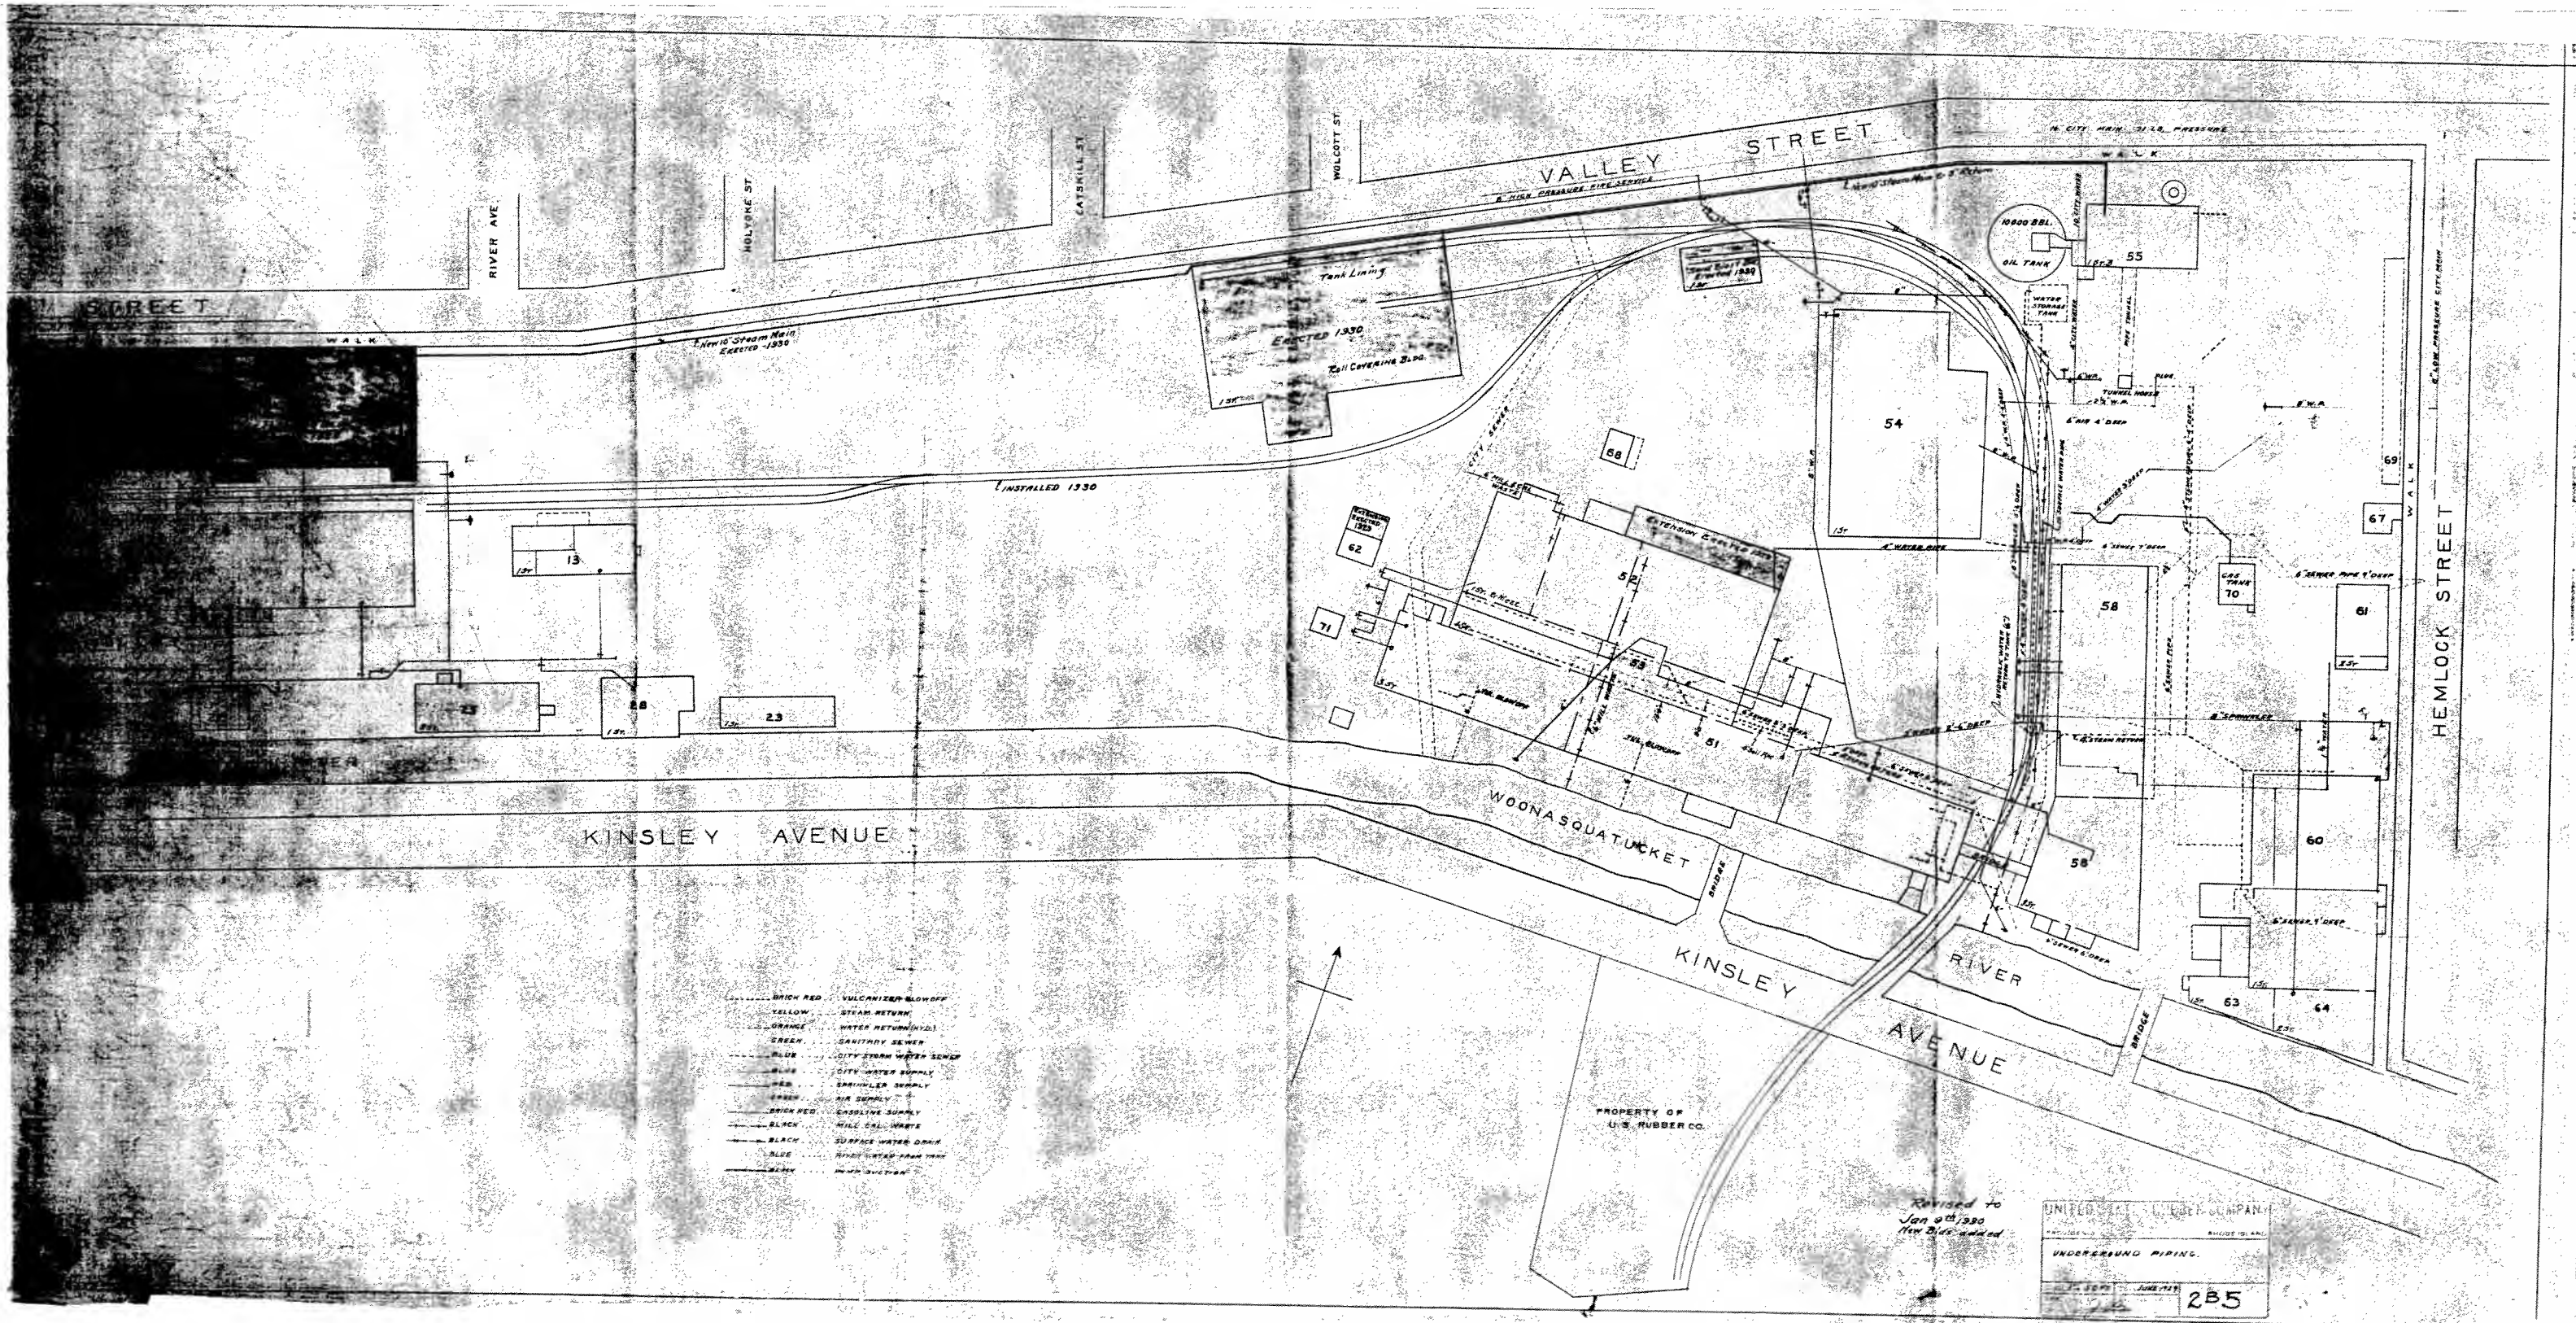

Jeffrey Crawford

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/15/2012 has revealed that there is 1

EXECUTIVE SUMMARY

RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/15/2012 has revealed that there are 19 RCRA-SQG sites within approximately 0.25 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Management's Master List of UST Facilities & Their Associated Tanks.

A review of the UST list, as provided by EDR, and dated 08/02/2012 has revealed that there are 26 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 06/25/2012 has revealed that there are 2 US BROWNFIELDS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/15/2012 has revealed that there are 36 RCRA-NonGen sites within approximately 0.25 miles of the target property.

US BROWNFIELDS:

Recipient name:	Rhode Island DEM
Grant type:	Section 128(a) State/Tribal
Property name:	FORMER CAPITAL RECORDS MANAGEMENT
Property #:	Not reported
Parcel size:	1.31
Property Description:	The site was initially developed some time prior to the 1870s and has been used for industrial purposes throughout its history. Primary industrial uses included locomotive manufacturing, machine shop, heavy machinery production and repair, and records warehousing. The present-day site building was constructed in approximately 1930 and is currently vacant.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Waste code: F008
Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM

Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110004922157

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Rhode Island - Permits, Licenses and Other Vital Environmental Records (RI-PLOVER) is the Rhode Island Department of Environmental Management's regulatory programs' information management system.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D001

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: R010
Waste name: WASTE OIL

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Waste code: D008
Waste name: LEAD

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Historical Generators:

Date form received by agency: 03/12/1990
Facility name: MATARESE & SONS SERVICE INC
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/07/2012	Source: EPA
Date Data Arrived at EDR: 07/05/2012	Telephone: N/A
Date Made Active in Reports: 09/18/2012	Last EDR Contact: 07/05/2012
Number of Days to Update: 75	Next Scheduled EDR Contact: 10/22/2012
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/07/2012	Source: EPA

Date Made Active in Reports: 09/18/2012	Last EDR Contact: 07/05/2012
Number of Days to Update: 75	Next Scheduled EDR Contact: 10/22/2012
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/27/2011	Source: EPA
Date Data Arrived at EDR: 02/27/2012	Telephone: 703-412-9810
Date Made Active in Reports: 03/12/2012	Last EDR Contact: 08/28/2012
Number of Days to Update: 14	Next Scheduled EDR Contact: 12/10/2012
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011	Telephone: 703-603-8704

Number of Days to Update: 36	Next Scheduled EDR Contact: 01/21/2013
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/15/2012
Date Data Arrived at EDR: 04/04/2012

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/30/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/30/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 09/05/2012
Number of Days to Update: 11	Next Scheduled EDR Contact: 12/24/2012
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/30/2011	Source: Environmental Protection Agency

Number of Days to Update: 11	Next Scheduled EDR Contact: 12/24/2012
	Data Release Frequency: Varies

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 12/09/2005	Source: Department of the Navy
Date Data Arrived at EDR: 12/11/2006	Telephone: 843-820-7326
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 05/21/2012
Number of Days to Update: 31	Next Scheduled EDR Contact: 09/03/2012
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 04/02/2012	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 04/03/2012	Telephone: 202-267-2180
Date Made Active in Reports: 06/14/2012	Last EDR Contact: 10/02/2012
Number of Days to Update: 72	Next Scheduled EDR Contact: 01/14/2013
	Data Release Frequency: Annually

State- and tribal - equivalent CERCLIS

SHWS: State Hazardous Waste Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 07/30/2012	Source: Department of Environmental Management
Date Data Arrived at EDR: 08/09/2012	Telephone: 401-222-3872
Date Made Active in Reports: 08/31/2012	Last EDR Contact: 04/11/2012

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 07/31/2012	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/13/2012	Telephone: 617-520-3000
Date Made Active in Reports: 09/18/2012	Last EDR Contact: 08/07/2012

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Provider Listing

Source: Department of Children, Youth & Families
Telephone: 401-528-3624

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Classification Data

Source: Dept. of Administration/Statewide Planning
Telephone: 401-222-6483

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Longitude (West):	71.4332 - 71° 25' 59.52"
Universal Tranverse Mercator:	Zone 19
UTM X (Meters):	297935.9
UTM Y (Meters):	4633395.0
Elevation:	13 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	41071-G4 PROVIDENCE, RI
Most Recent Revision:	1987

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

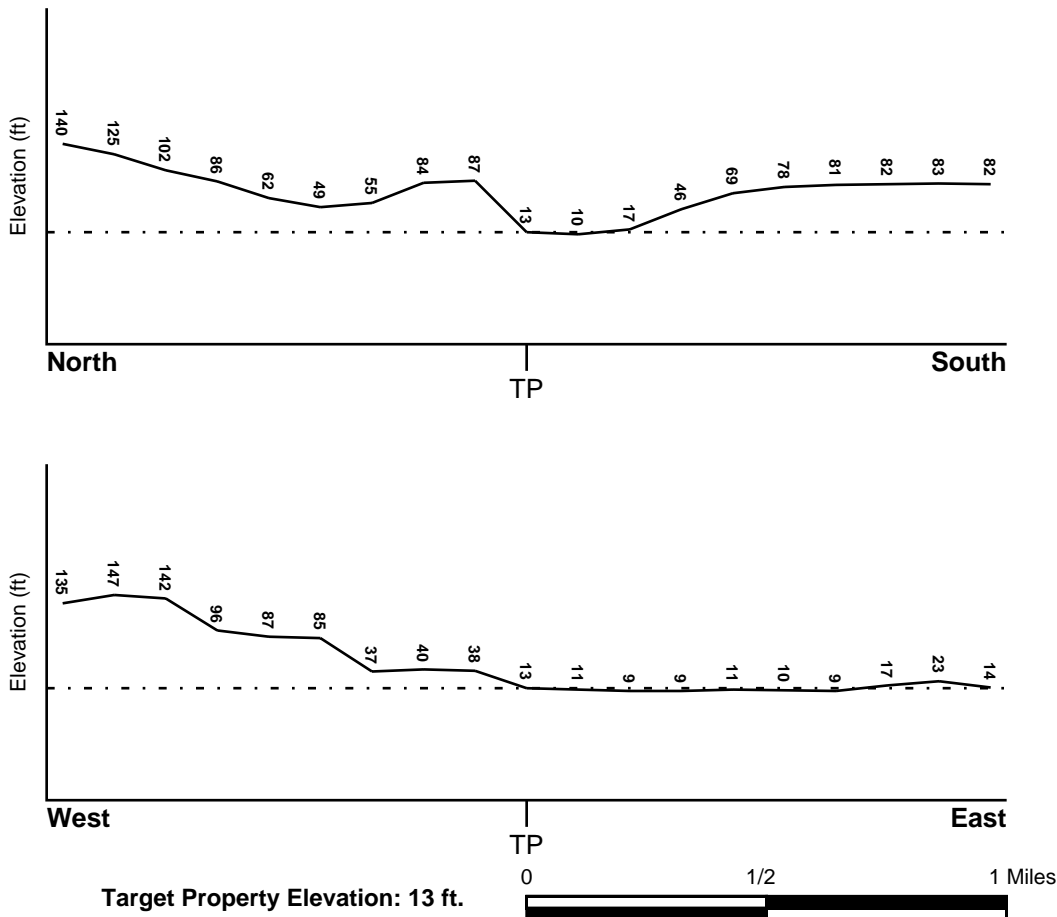

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> PROVIDENCE, RI	<u>FEMA Flood Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	44007C - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> PROVIDENCE	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Agency cd:	USGS	Site no:	414939071260801
Site name:	RI-PRW 1051		
Latitude:	414939	EDR Site id:	USGS2070740
Longitude:	0712608	Dec lat:	41.8276
Dec lon:	-71.4350575	Coor meth:	M
Coor accr:	S	Latlong datum:	NAD27
Dec latlong datum:	NAD83	District:	25
State:	44	County:	007
Country:	US	Land net:	Not Reported
Location map:	Not Reported	Map scale:	Not Reported
Altitude:	10.00		
Altitude method:	Interpolated from topographic map		
Altitude accuracy:	10		
Altitude datum:	National Geodetic Vertical Datum of 1929		
Hydrologic:	Narragansett, Massachusetts, Rhode Island. Area = 1330 sq.mi.		
Topographic:	Valley flat		
Site type:	Ground-water other than Spring	Date construction:	Not Reported
Date inventoried:	Not Reported	Mean greenwich time offset:	EST
Local standard time flag:	Y		
Type of ground water site:	Single well, other than collector or Ranney type		
Aquifer Type:	Not Reported		
Aquifer:	Not Reported		
Well depth:	82.0	Hole depth:	Not Reported
Source of depth data:	other		
Project number:	Not Reported		
Real time data flag:	0	Daily flow data begin date:	0000-00-00
Daily flow data end date:	0000-00-00	Daily flow data count:	0
Peak flow data begin date:	0000-00-00	Peak flow data end date:	0000-00-00
Peak flow data count:	0	Water quality data begin date:	0000-00-00
Water quality data end date:	0000-00-00	Water quality data count:	0
Ground water data begin date:	1948-01-01	Ground water data end date:	1994-12-29
Ground water data count:	558		

Ground-water levels, Number of Measurements: 558

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Classification Data

Source: Dept. of Administration/Statewide Planning

Telephone: 401-222-6483

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Community and Non-Community Wells

Source: Department of Environmental Management

Telephone: 401-277-2234

Includes Community, Non-Transient Non-Community and Transient Non-Community.

EPA-Approved Sole Source Aquifers in Rhode Island

Source: EPA

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

OTHER STATE DATABASE INFORMATION

RADON

State Database: RI Radon

Source: Department of Health

Telephone: 401-222-2438

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

RIDEM File Information

**Jopelo Realty Company
c/o Mr. Peter Zavota
214 Home Avenue
Providence, RI 02908**

By Certified Mail

Rhode Island Department of
Environmental Management
Division of Air and
Hazardous Materials
291 Promenade Street
Providence, RI 02908

Dear Sir/Madam:

Pursuant to Section 5.01 of the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases promulgated by the Rhode Island Department of Environmental Management ("Regulations"), the undersigned owner of the property located at 485 Valley Street, Providence ("Property") hereby provides you with notice of the release of material on the Property which may be governed by the Regulations.

The following information, in compliance with Section 5.05 of the Regulations, is hereby supplied:

- A. The name, address and telephone number of the person notifying the Department of the release, the owner and operator of the site or the vessel where the release has occurred, any other responsible parties identified, the contact person at the site or vessel where the release has occurred, and the identity of governmental representative and/or private contractors responding to the release;

- Answer:* (i) Mr. Peter Zavota, General Manager, c/o Jopelo Realty Company, 214 Home Avenue, Providence, RI 02908, 401/351-6830;
- (ii) Owner: Jopelo Realty Company;
- (iii) Operator: C. O. Hoffacker Company (tenant-in-possession);
- (iv) Other Responsible Parties: Unknown by Owner at this time;
- (v) Contact Person: James E. Bilodeau, Jr., Esq., Updike, Kelly, Spellacy & Del Sesto, 1492 Turks Head Building, Providence, RI 02903;
- (vi) Private Contractor: Inland Waters Pollution Control, Inc.
(Report attached)

- B. The time of initial notification and the actual person within the Department who was initially notified of the release;
Answer: Notified per this letter.
- C. The location of the release and the legal description of the site (plat and lot);
Answer: 485 Valley Street, Providence, RI, Plat 27, Lot 263 (Plat and Lot numbers correspond to 475 Valley Street).
- D. The date, time and duration of the release and the circumstances leading to and surrounding the discovery of the release;
Answer: Unable to determine.
- E. An identification of the hazardous material released, the approximate concentrations of hazardous substances in the released material, the approximate quantity of the hazardous material released, and a copy of the Material Safety Data Sheets for the released material;
Answer: See report attached hereto.
- F. An initial estimate of the source of the release and the extent and nature of contamination resulting from the release;
Answer: See report attached hereto.
- G. The extent of injuries, if any;
Answer: None known to Owner.
- H. Measures taken or proposed to be taken in response to the release as of the time of notification; and
Answer: The quantities involved may not require a response.
- I. Any other relevant information, including but not limited to, potential environmental impacts and other factors evaluated in determining whether or not the release presents an imminent hazard.
Answer: See report attached hereto.

Pursuant to Section 5.06 of the Regulations, the undersigned hereby certifies to the best of its knowledge, that:

- (i) the above-listed information is accurate; and
- (ii) the report is a complete and accurate representation of the site and release, and contains all known or reasonably ascertainable facts surrounding the release.

Very truly yours,

Jopelo Realty Company

RE: Site Characterization Inspection
Japelo Realty - P. Zavota and L. Zavota
475-485 Valley Street
Providence R.I.

Dear Mr. Bilodeau:

In response to your facsimile of 25 February 1994 concerning the LOR #93-048 issued to Peter Zavota and Louis Zavota (your clients), this Division has reviewed the attached investigation outline by Garafalo + Associates, Inc. and has generated the following comments:

1. A brief work plan should be developed using this outline showing where specifically the borings are to be installed. Also, all procedures to be followed for sampling, QA/QC and site maps should be included in the work plan. This work plan should be submitted back to the Division as soon as possible for an expedited review, comment (if necessary) and concurrence. A final report summarizing the data at the site should be forwarded to the Division upon completion of the laboratory analysis.
2. The investigation may need more than four borings to determine the extent of contamination at the site. The contractor should be allowed flexibility in order to keep the project on schedule.
3. The Division requires 48 hour notification prior to on site work.

Please submit the work plan to me as soon as possible. If you have any questions, please call me at 277-2797.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeffrey Crawford', written in a cursive style.

GAROFALO

WORK PLAN

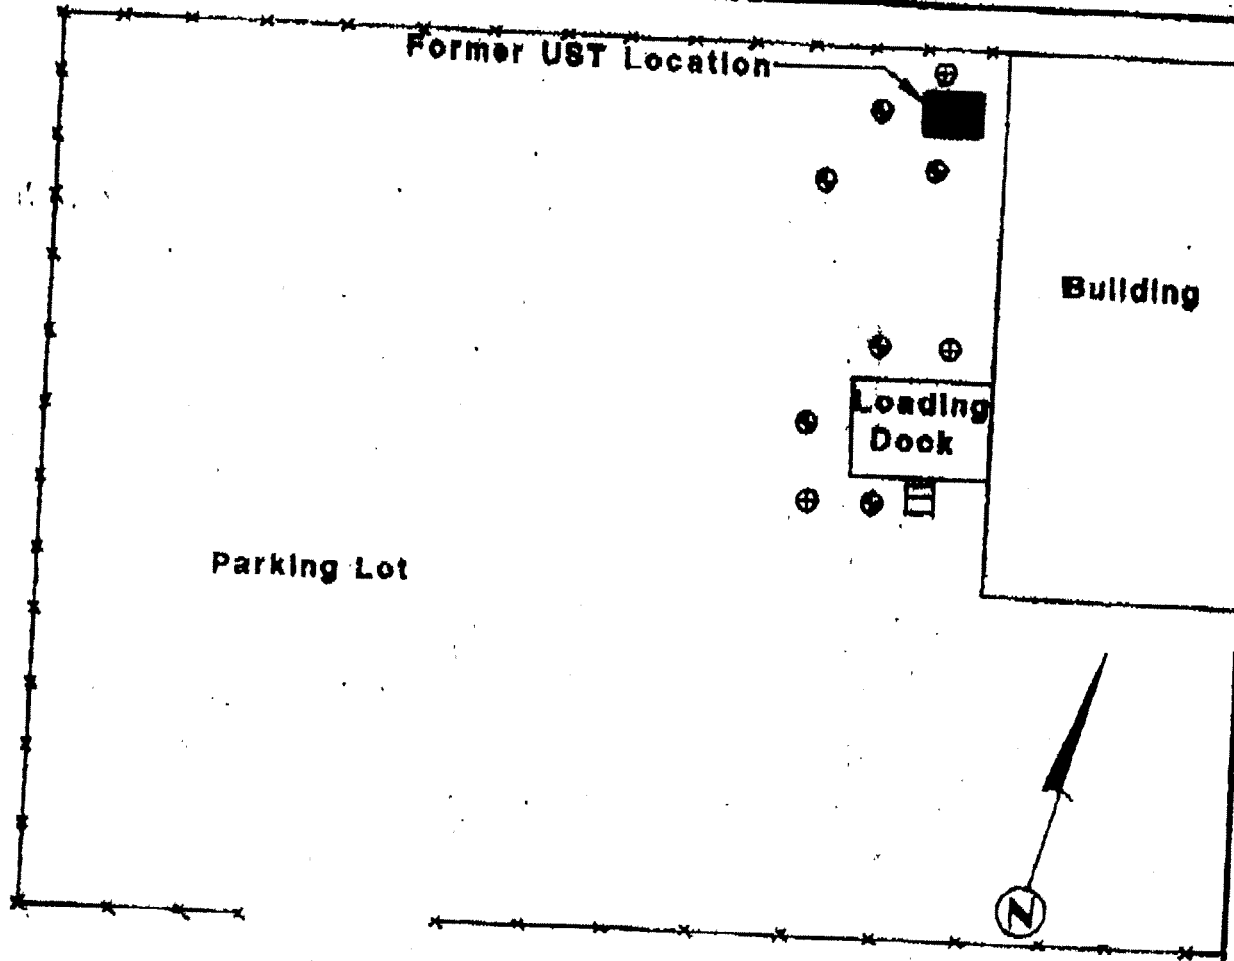

Site Characterization Investigation
475- 485 Valley Street
Providence, RI

In an attempt to determine the magnitude and extent of the soil contamination, previously identified in the vicinity of the former underground fuel oil storage tank and loading dock, G&A will conduct the following investigation:

1. G&A will obtain the services of a drilling contractor to install 6 boreholes within the areas of concern. If time and drilling conditions permit, additional boreholes may be added. The proposed locations of the boreholes are identified on Figure 1. On-site operations will be performed under the criteria established for Level D Personal Protection. Personnel are required to have the necessary equipment to upgrade to Level C, if conditions warrant.
2. Soil samples will be secured at the surface and subsequent 5 foot intervals during drilling, by our engineers, via split spoon sampling. Sampling procedures will adhere to the protocol established by ASTM D1586-84. Samples will be field screened for volatile organic compounds (VOC's) using a photoionization detector (PID).
3. Four select soil samples, exhibiting the highest PID readings, will be laboratory analyzed for volatile organic compounds (Method 8240), Polychlorinated Biphenyls (Method 8080) and Total Petroleum Hydrocarbons (Method 418.1). Analysis will be performed by Toxikon Corporation, a Rhode Island certified laboratory.
4. G&A maintains an in-house QA/QC Program which includes sampling protocol designed to minimize sources of error in each stage of the sampling process, from sample collection to analysis and reporting of analytical data. Additional QA/QC procedures must be followed in the laboratory.
5. G&A will provide an interpretation of the analytical results, a log of observations, and conclusions and recommendations for additional assessment, if necessary, in the form of a technical report. This report will be designed to meet the criteria established in the Rhode Island Department of Environmental Management's Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases, DEM-DSR-01-93.

Valley Street, Providence
March 16, 1994

Dear Mr. Bilodeau:

This Division has received and reviewed the abovementioned work plan which was submitted on behalf of your clients and in response to the LOR #93-048. The Division concurs with the work plan and requests that your clients proceed as soon as possible with the implementation of the plan. Please notify the Division 48 hours prior to the start of field work. Also, your clients are reminded that the Site Characterization report is due at the Division on or about 30 April 1994.

Sincerely,

GENERAL INFORMATION

Notification is required by Federal law for all underground tanks that have been used to store regulated substances since January 1, 1974, that are in the ground as of May 8, 1986, or that are brought into use after May 8, 1986. The information requested is required by Section 9002 of the Resource Conservation and Recovery Act, (RCRA), as amended.

The primary purpose of this notification program is to locate and evaluate underground tanks that store or have stored petroleum or hazardous substances. It is expected that the information you provide will be based on reasonably available records, or, in the absence of such records, your knowledge, belief, or recollection.

Who Must Notify? Section 9002 of RCRA, as amended, requires that, unless exempted, owners of underground tanks that store regulated substances must notify designated State or local agencies of the existence of their tanks. Owner means—

(a) in the case of an underground storage tank in use on November 8, 1984, or brought into use after that date, any person who owns an underground storage tank used for the storage, use, or dispensing of regulated substances, and

(b) in the case of any underground storage tank in use before November 8, 1984, but no longer in use on that date, any person who owned such tank immediately before the discontinuation of its use.

What Tanks Are Included? Underground storage tank is defined as any one or combination of tanks that (1) is used to contain an accumulation of "regulated substances," and (2) whose volume (including connected underground piping) is 10% or more beneath the ground. Some examples are underground tanks storing: 1. gasoline, used oil, or diesel fuel, and 2. industrial solvents, pesticides, herbicides or fumigants.

What Tanks Are Excluded? Tanks removed from the ground are not subject to notification. Other tanks excluded from notification are:

1. farm or residential tanks of 1,100 gallons or less capacity used for storing motor fuel for noncommercial purposes;
2. tanks used for storing heating oil for consumptive use on the premises where stored;
3. septic tanks;

4. pipeline facilities (including gathering lines) regulated under the Natural Gas Pipeline Safety Act of 1968, or the Hazardous Liquid Pipeline Safety Act of 1979, or which is an intrastate pipeline facility regulated under State laws;
5. surface impoundments, pits, ponds, or lagoons;
6. storm water or waste water collection systems;
7. flow-through process tanks;
8. liquid traps or associated gathering lines directly related to oil or gas production and gathering operations;
9. storage tanks situated in an underground area (such as a basement, cellar, mineworking, drift, shaft, or tunnel) if the storage tank is situated upon or above the surface of the floor.

What Substances Are Covered? The notification requirements apply to underground storage tanks that contain regulated substances. This includes any substance defined as hazardous in section 101 (14) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), with the exception of those substances regulated as hazardous waste under Subtitle C of RCRA. It also includes petroleum, e.g., crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute).

Where To Notify? Completed notification forms should be sent to the address given at the top of this page.

When To Notify? 1. Owners of underground storage tanks in use or that have been taken out of operation after January 1, 1974, but still in the ground, must notify by May 8, 1986. 2. Owners who bring underground storage tanks into use after May 8, 1986, must notify within 30 days of bringing the tanks into use.

Penalties: Any owner who knowingly fails to notify or submits false information shall be subject to a civil penalty not to exceed \$10,000 for each tank for which notification is not given or for which false information is submitted.

INSTRUCTIONS

Please type or print in ink all items except "signature" in Section V. This form must be completed for each location containing underground storage tanks. If more than 5 tanks are owned at this location, photocopy the reverse side, and staple continuation sheets to this form.

RE: Underground Storage Tank
Approval of New Installation - Facility I.D. 3464

Dear Mr. Zavota:

This office has reviewed and approved the plans and specifications for the new installation of one (1) 3,000 gallon underground storage tank, storing #2 fuel oil, at 485 Valley Street, Providence, Rhode Island.

Please note the following requirements:

- a) DEM shall be notified 48 hours prior to the tank installation.
- b) This letter of approval shall be valid for a period of one year from the above date.

If you have any questions, please feel free to contact the undersigned at 277-2234.

Sincerely yours,

Gregory Yekhtikian

RE: Underground Storage Tank Closure Application
Commercial Property
485 Valley Street
Providence, RI

Dear Ms. Stanton:

After having an environmental site assessment completed on the above mentioned property, our consultant discovered the existence of one underground storage tank (UST). Upon this discovery, I immediately contacted Kenyon Environmental Inc. (KEI), in order to assess my options and responsibilities. KEI indicated that the tank should be permanently "closed" in order to comply with existing RI DEM Regulations. Enclosed, please find a copy of the completed *Permanent Closure Application for Underground Storage Tank(s)*, which lists our plans, as well as all other parties to be involved with this project.

Due to certain underlying conditions, as well as time constraints for the completion of other on-Site activities, an expeditious approval of this application would be greatly appreciated. Should you have any questions or comments regarding our request, please do not hesitate to contact either my office, or a representative of KEI. I wish to thank you in advance for your anticipated cooperation in this matter.

Sincerely,

Harvey Swartz

RE: Underground Storage Tank Closure
Capital Records Management, 485 Valley St, Providence

Dear Mr. Swartz:

This Office of Waste Management has reviewed the Permanent Closure Application For Underground Storage Tank(s) for the above referenced property. The following UST(s) are approved to be closed on January 14, 1999:

UST ID #	VOLUME	STORED MATERIAL	REMOVED/ FILLED
<u>003</u>	<u>800 gallon</u>	<u>Heating Oil</u>	<u>REMOVED</u>

This letter and a copy of the UST closure application are an approved replacement for the Closure Inspection Sheet ("pink slip"). All USTs are to be removed and handled as described in the closure application. Your contractor is required to contact me on the day of the UST closure for verification. I can be reached at (401) 222-2797 extension 7116.

Sincerely,

Kevin Gillen

VII. DESCRIPTION OF TANK(S) TO BE CLOSED

Tank No.	Age	Date Last Used	Volume	Construction Materials	Stored Material
1	UNKNOWN	UNKNOWN	800 GALLONS (EST.)	STEEL	#2 HEATING OIL

* If there are more tanks being closed please list on an attachment.

VIII. LOCATION OF TANK(S) (Sketch diagram)

IX. CLOSURE INFORMATION

Will tank(s) be excavated, cleaned and disposed of (Section 15.11)? YES NO
Specify method of tank cleaning: SQUEEGE + SOLVENT PADS or _____

If circumstances exist which inhibit excavation, you may request a UST Closure in Place. *This request is subject to DEM approval.* Are you requesting to close tank(s) in place? YES NO
Owner must submit supporting documentation providing specific details on the necessity to close in place and a detailed diagram must be attached to this application. *Please note: There are additional requirements for determining tank integrity as detailed in the Closure in Place guidelines.*

Specify whether cleaning will take place: ON-SITE OFF-SITE
If OFF-SITE, indicate location of final tank(s) cleaning (Name & Address): _____

Will tank(s) be rendered unfit for use and disposed of? YES NO
If YES, location for final tank(s) disposal: STATE LINE SCRAP ATTLEBORO, MA

Will tank(s) be reused? YES NO
Please note: Reuse of a tank in the ground requires compliance with Section 12.03 of UST Regulations.

If tank(s) is to be reused, specify:
Proposed use: _____
Name & Address of intended user: _____

Describe the method to be used to empty the tank(s) prior to excavation: VAC-TRUCK

Describe the method to be used to remove the tank(s) from excavation: BACK HO

Describe the method(s) to be used to properly and safely vent the tank(s) and properly make openings in the tank(s):
COMPRESSED AIR / VENTURI + DRY ICE

Please note: Appropriate venting must be carried out both before the cutting of any tank and before off-site transport of any tank which has not been completely cleaned per Rule 15.11(c) of the UST Regulations.

Describe the instruments used to verify that the tank(s) have been properly vented: 4 GAS / LEL METER
I WILL NOT CUT TANK ON SITE *NOTE*

Describe how any residues remaining in the tank(s) will be managed: PUMPS BY VAC-TRUCK

Have these tank(s) ever held non-petroleum, hazardous materials? YES NO
If yes, please list materials: _____

Have any of the tank(s) ever contained a product other than that listed in Section VII above? YES NO
If yes, please list tank # and material stored: _____

After the closure(s) have been completed on the aforementioned tank(s), will there be any underground storage tank(s) remaining in existence at this facility? YES NO

Will any new UST(s) be installed on the site? YES NO
If YES, please note: Prior written approval by DEM is required.

X. WASTE HAULER INFORMATION (if applicable)

Firms transporting tank sludge and waste or tank(s) which require further cleaning must be permitted by DEM, Division of Waste Management, RCRA Section as Hazardous Waste Transporters.

Specify method for disposing of tank sludges or wastes generated by the cleaning process: VAC TRUCK TO TRANSPORT MATERIAL TO RECYCLING FACILITY

Name of Waste Hauler: WESTERN OIL CO
 Address: 389 CHURCH ST City: PROVIDENCE State: RI Zip: 02906
 DEM Waste Hauler Permit #: RI 326

XI. NOTIFICATION OF LOCAL FIRE DEPARTMENT

The authorized signature of the local fire department below indicates that the local fire officials have been notified that you are planning to close an underground storage tank(s) at the above location. **You must also notify the local fire department of the exact closure date after you have confirmed this date with DEM.**

December 12, 2006

Mr. William Dandreta
28 Wolcott Street
Providence, RI 02908

RE: Wm. Dandreta Co., 28 Wolcott Street, Providence, RI
(RIDEM UST Facility ID No. 4132; LUST No. ST-28275)

Dear Mr. Dandreta:

The Underground Storage Tank (UST) Management Program has reviewed a "UST Closure Assessment" report for the above-referenced facility, which was prepared by FJA Environmental Associates, Inc. ("FJA") and was received by the Department on November 9, 2006. Based on the results of these reports along with the environmental specifics of the site, the UST Management Program is not requiring any further environmental action at this site. The site's status as a Leaking Underground Storage Tank ("LUST") site will be changed from "active" to "inactive" for Department purposes only. The LUST file will remain on-record at the Department and will be available for public review.

Neither the Department's decision to halt further remedial work nor its deactivation of the site's LUST status should be construed as a determination by the Department that the site is "clean" or otherwise free of petroleum or other contaminants. Contaminated soil and/or groundwater may still be present in the or around the area known to have been impacted by the release. Any contaminated soil or groundwater that may be encountered as a result of future excavation, trenching, grading or drilling activities in or near the area impacted by the release must be managed in accordance with RIDEM's *Oil Pollution Control Regulations* and *Solid Waste Regulations*. The Department of Environmental Management reserves the right to require additional investigation and/or remediation if contamination attributable to this site is discovered in the future or if the land use changes.

If you have any questions, please contact the undersigned at (401) 222-2797, extension 7121.

Sincerely,

A handwritten signature in cursive script that reads "Sofia M. Kaczor".

***RE: Underground Storage Tank Closure Assessment
Wm. Dandreta Company
28 Wolcott Street
Providence, Rhode Island 02908***

Dear Mr. Wilbur:

FJA Environmental Associates, Incorporated (FJA) has completed an *Underground Storage Tank Closure Assessment* at the above referenced site (referred to hereafter as the "Site" or "Subject Property").

The Underground Storage Tank (UST) Closure Assessment was conducted in accordance with the Rhode Island Department of Environmental Management (RIDEM), "Rules and Regulations For Underground Storage Facilities Used For Petroleum Products and Hazardous Materials" (UST Regulations), last amended June, 2005. The purpose of this investigation was to visually locate one (2,000 gallon #2 fuel oil) steel underground storage tanks located on the Subject Property, and to determined if a release had occurred from the on-site UST. All observations noted in this limited report were made under existing Site conditions and research conducted during the time of investigation.

Our findings, conclusions and recommendations regarding this UST closure assessment are as follows:

- 1.) The Site is located on the westerly side of Wolcott Street, approximately 100 feet north of Valley Street in the Smith Hill section of Providence, Rhode Island. According to city records, the 0.34 acre property is identified on Assessor's Plat Map 66, as being Lot 430. Records also revealed that the Site is presently zoned "R-2" (Residential. In general, the 0.34 acre parcel consists of a 1-story, concrete block commercial building surrounded by asphalt parking and vegetated areas. It was observed that access to the Subject Property is provided by an entrance gate located along Wolcott Street. A "Site Locus Map" (refer to **Appendix A**) depicting the subject area is presented as **Figure 1**.

- 2.) According to Site records and Mr. William Dandreta (the property owner), the Subject Property was utilized as a electronic parts & equipment sales facility from approximately 1953 to the present. The property owner also mentioned that prior to 1953, the Site was utilized as a manufacturing company.
- 3.) According to groundwater maps maintained by the RIDEM, the groundwater at the subject area is classified as "GB". A "GB" classification is defined as groundwater sources that may not be suitable for public or private drinking water without treatment due to known or presumed degradation. Also, there are no community or non-community water system wellhead protection areas within a ½ mile radius of the Subject Property. Records and research conducted by FJA revealed that there are no public or private water supply wells abutting or near the Subject property. The Site is presently serviced by city water and sewer.
- 4.) FJA personnel arrived at the Subject Property on October 13, 2006, and inspected a test pit (TP-1) being excavated (using a JCB 214 backhoe) along the northeast rear section of the building. The excavation was performed by Taraco Precision Testing, Incorporated (Taraco) of Johnston, RI. A 2,000 gallon #2 fuel oil steel tank was observed within TP-1 which measured approximately 16 feet long, 12 feet wide and 11.0 feet in depth. According to Mr. Dandreta, the fuel oil UST was used to heat the commercial building. The property owner stated that the tank was over 50 years in age. Mr. Dandreta also indicated that there were no records of tank tightness tests regarding the subject UST.
- 5.) On October 12, 2006, Taraco pumped 586 gallons of product (#2 fuel oil) which was stored within the tank. A copy of the Bill of Lading regarding the product disposal is attached in **Appendix B**. The UST was removed from the tank grave and placed on-site for inspection. As described in detail in the following sections, FJA identified and analyzed soil samples obtained from within the test pit area to determine if a release had occurred from the removed tank. FJA personnel did observe petroleum staining, saturation and olfactory evidence from the soils within TP-1 from an approximate depth range of 5 to 10.5 feet below grade (bg). Based upon the condition of the UST, as described below, the release was most likely due to the age of the tank. Groundwater was not observed at the bottom of the tank grave which was measured at 11.0 feet bg. No potential environmental receptors (e.g. storm drains, private wells) were identified on the Subject Property. Under the direction of FJA, Taraco excavated 69.19 tons of contaminated soil from TP-1 on October 13, 2006. The contaminated soil was stockpiled on and covered with 6 ml plastic sheeting on the asphalt parking lot located on the southern section of the Site.

The UST was visually inspected by FJA personnel and found to be in poor condition with evidence of corrosion and pitting. In addition, several holes were identified along the bottom of the tank. No groundwater observation wells were observed on the Subject Property. Refer to **Figure 2** ("Site Plan") in regards to

noted site features including the building, contaminated soil stockpile and UST locations. Photographs depicting the removed tank and soil stockpile are also included in **Appendix C**.

- 6.) As depicted in **Appendix D**, a total of twenty seven (27) soil samples were taken in predetermined areas directly above, around and below the area of the UST and associated test pit. The above mentioned samples were field screened utilizing a portable Photo-ionization Detector (PID). It should be noted that a PID meter is an instrument that detects total organic vapors in parts per million (ppm) as benzene which is found in petroleum fuel. Test results from the soil screening with respect to UST and associated tank grave ranged from 0.0 (Sample #1, Top North Side of UST @ 1.0 feet bg) to 54.0 (Sample #7, North Bottom of UST @ 5.0 feet bg) ppm which were above the site specific standard, as established by the RIDEM. It should be noted that the site specific standard is 40 ppm or less in areas where the groundwater has been classified as "GB". For additional information regarding the soils classified (using the "Unified Soil Classification System") and soil screening test results with respect to the UST & associated tank grave, refer to **Appendix D**.

A composite soil sample (Sample #SS-1) was also collected from the top, middle and bottom of the contaminated stockpile on October 13, 2006. According to American Reclamation Corporation (AMREC) of Charlton, MA, the composite sample taken from the soil stockpile must be analyzed for the various analytical parameters shown on (see **Appendix E**) the "Soil Analysis Criteria for Acceptance of Petroleum Contaminated Soils" sheet. Based upon soil screening test results, this is a required procedure for the disposal of contaminated soils unless waived by the RIDEM. A copy of the "Material Shipping Record & Log" regarding the contaminated soil stockpile is also included in **Appendix E**.

On October 13, 2006, a confirmatory composite soil sample (#CS-1) was collected from the side-walls of TP-1 at a depth of 11.0 feet bg. In addition, two (2) confirmatory grab soil samples (Sample #CS-2 & CS-3) were taken from the bottom of test pit at a depth of 11.0 feet bg. As required in the regulations mentioned above, the confirmatory soil samples collected from the bottom of UST grave were analyzed for Total Petroleum Hydrocarbons (TPH). As shown in the attached "Certificate of Analysis" (COA), TPH test results were below the detection limit of <20 ppm. It should be noted the RIDEM, Method 1 GB TPH Leachability Criteria is 2,500 ppm or less. For additional information regarding the analytical test results with respect to the soil stockpile and UST, refer to the attached COA in **Appendix F**.

- 7.) Based upon the soil screening test results, Taraco backfilled the test pit with clean soil on October 13, 2006. On October 24, 2006, Taraco transported the UST to State Line Scrap Company, Inc. of South Attleboro, MA. A copy of the tank disposal receipt is included in **Appendix G**.

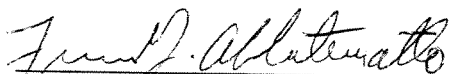

Taraco also transported ⁹68.19 tons of contaminated soil to AMREC for disposal on November 2, 2006. A copy of the disposal receipts regarding the contaminated soil are included in **Appendix H**.

Based upon the data reported during the course of this UST assessment, no information suggested or was made available to indicate that further actions are warranted with respect to the Site. A signed "Certification Statement" regarding this report is attached in **Appendix I**.

The accuracy of the conclusions derived from the data is based solely on the accuracy of the data reported and or supplied. Should data be made available concerning the Site which is not included in this report, it should be reported to FJA so that findings, conclusions and/or recommendations can be altered and modified (if necessary). Events occurring on the Subject Property after on-site inspections are beyond the scope of this report.

Should you have any questions pertaining to this report or require additional information, please contact the undersigned. We appreciate the opportunity to have provided our services.

Respectfully submitted,

ASTM Questions to Address User Responsibilities:

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfield's Revitalization Act of 2001 (the "*Brownfields Amendments*") the *user* should provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

1) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).
Based on the results of a **chain of title and title restriction** review, are there any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law?

None that I know of.

2) Activity and land use limitation (AUL) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Based on the results of a **chain of title and title restriction review**, are there any activity and land use limitations, such as *engineering controls, land use restrictions* or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? If yes, explain:

None that I know of.

3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? If yes, please explain:

No

4) The relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Unknown

5) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).
Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases?

If yes, please answer the following questions:

- a) What were the past uses of the *property*?
- b) What chemicals are present or once were present at the *property*?
- c) What spills or other chemical releases that have taken place at the *property*?
- d) Explain any environmental cleanups that have taken place at the *property*.

previously gave this information
} None that I know.

PHASE I USER QUESTIONNAIRE
PAGE 2 of 2

6) The degree of obviousness or the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). As the user of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

No

Other Questions:

ASTM Practice 1527-05 also requires that the *user* answer the following questions:

7) As the user of this *ESA*, are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property? If so, explain:

None, that I know of.

8) As the user of this *ESA*, are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property? If yes, explain:

None, that I know of.

9) As the user of this *ESA*, are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability related to hazardous substances or petroleum products? If yes, explain:

None, that I know of.

10) We are required to ask you as the user if you have any of the following reports in your possession. Please place an "X" next to each report that is available:

- Environmental site assessment reports
- Environmental compliance audit reports
- Environmental permits
- Underground storage tank notification forms
- Registrations for underground injection systems
- Material safety data sheets
- Community right to know plans
- Safety plans, preparedness and prevention plans, spill prevention, countermeasure and control plans
- Reports regarding hydrogeologic conditions on the property or surrounding area
- Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws
- Hazardous waste generator notices or reports
- Geotechnical studies
- Risk assessments
- Activity and use restrictions

Please provide Fuss & O'Neill with copies of each report or make these reports available for inspection.
